# 1 Introduction

The hackneys.com domain was established on 10 August, 1996 by Douglas Hackney as a resource for Hackney family history and personal use.

Hackneys.com was initially used as a repository for general personal photos, information, etc., much as a modern social networking or personal / family blog site is used.

In 1997 Adam Hackney and two high school classmates created the Alexander the Great history web site as part of a Wisconsin state History Day competition. The Alexander the Great web site was hosted under hackneys.com and has since grown into one of the world's top ranked and utilized web resources on that topic.

Migration of the alex\_web Alexander the Great web site to its own domain is planned, so that hackneys.com folder structure may not be populated.

While the hackneys.com site always had some basic Hackney family history information, the initial Hackney family history web site creation and load of family history information in the current form was about 2001.

On 13 November 2004 a second domain, amboymedia.com, was created in anticipation of the need for storing large quantities of video data from recorded oral histories of family members.

Hackneys.com was initially hosted by Douglas Hackney's corporate hosting firm, Expressramp, located in Chicago, IL. After Douglas Hackney shut down his company, Enterprise Group, Ltd., his former hosting firm was purchased. Hackneys.com was then moved to Bluehost, a Utah based web hosting firm. At this time, amboymedia.com was also initialized at Bluehost.

# 2 Domain Status & Environment

Bluehost currently has a 15 gigabyte size limit on all accounts, thus the requirement for two domains to house the family history site. As of 23 April, 2006, hackneys.com is using 4.5 gigabytes and amboymedia.com is using 4.4 gigabytes.

Bluehost requires annual renewal for all domains. Current hosting accounts are paid until:  
Hackneys.com – 18 January, 2010, amboymedia.com – 4 March, 2010.

All domains are registered with Network Solutions. Current registrations are paid until:  
hackneys.com – 9 August, 2013, amboymedia.com – 13 November, 2011.

Domain Status					
Domain Name	Registrar	Domain registration expires	Server Hosting Company	Hosting contract expires	Current size
hackneys.com	Network Solutions	9 August, 2013	Bluehost	18 January, 2010	4.5 GB
amboymedia.com	Network Solutions	13 November, 2011	Bluehost	4 March, 2010	4.4 GB

## hackneys.com Environment

Domain Registrar: Network Solutions

Server Host: Bluehost

hackneys.com  
70.103.189.75

amboymedia.com  
70.103.189.93

### Contents

- hackneys.com (web & email)
- hackneys.com/travel (Doug & Steph Hackney travel)
- hackneys.com/alex\_web (Alexander the Great site)
- egltd.com (email only)

### Contents

- amboymedia.com (web)

### Applications

- All standard Bluehost utilities & apps
- Gallery2 (media server)

### Applications

- All standard Bluehost utilities & apps
- MSFT Frontpage extensions
- phpGEDview (family tree)

### **3 Linux Environment File Names**

The Linux operating system is case sensitive for file names. If you normally work with a Windows based web server, which ignores case, you may have lax file name case discipline. This can make your life very challenging in a Linux environment. The hackneys.com site was developed and originally hosted on a Windows server and subsequently ported to its current Linux environment. Consequently, there is a mix of upper and lower case file names, which has caused no end of trouble.

It is VERY IMPORTANT to maintain all lower case for all file names.

Current file naming standards for hackneys.com:

1. All lower case
2. Use a dash (-) to fill all spaces, i.e. douglas-hackney-photo.jpg

### **4 Site Management**

Site management is accomplished by utilizing a variety of tools including:

#### **4.1 Bluehost Utilities**

- Control Panel (accessed via logging on the desired domain at [www.bluehost.com](http://www.bluehost.com))
- File Manager (accessed via Bluehost Control Panel)
- phpMyAdmin (accessed via Bluehost Control Panel)
- Email Manager (accessed via Bluehost Control Panel)
- FTP Manager (accessed via Bluehost Control Panel)
- Web/FTP Stats (accessed via Bluehost Control Panel)
- SSH/Shell Access (accessed via Bluehost Control Panel)

#### **4.2 PC / local Utilities**

- WS\_FTP Pro (FTP file transfer between server and PC)
- Windows Explorer (file copy, transfer, rename, etc.)

## 5 Content Management

Site content management is accomplished by utilizing a variety of applications including:

- MSFT Frontpage (web page development & maintenance)
- MSFT Word (document development & maintenance)
- MSFT XL (document development & maintenance)
- MSFT Internet Explorer (HTML/PHP page preview/review)
- MSFT Windows Wordpad (Gallery template editing)
- MSFT Windows Notepad (PHP file editing)
- MSFT Windows Media Player (video file review)
- Adobe Acrobat (PDF file creation)
- Adobe Premiere Pro 1.5 (video editing, video file creation & export)
- Adobe Audition 1.5 (audio file cleanup/filtering/correction)
- Adobe Photoshop CS (photo file editing/manipulation/correction)
- Canon Digital Photo Professional (RAW file edit, manipulation, conversion)
- Canon ZoomBrowser (panorama stitching)
- Paint Shop Pro V9 (crop, manipulation, correction, captioning, etc.)
- Paint Shop Album V5 (photo web album creation)
- Breeze Browser Pro (photo view/edit/sort, file rename as sorted)
- Cam2PC (batch photo resizing/processing)
- Roxio Easy Media Creator 8 Suite
  - Video Wave (video editing, video file creation & export)
- RenameWiz (file renaming)
- Ancestral Quest V11 (family tree creation & maintenance, GEDCOM file export)
- Calendar Creator V12 (family calendar creation & maintenance)
- Gallery Remote (photo file upload to Gallery2 server application)
- Super Flexible File Synchronizer (file backup)
- i.Disk (disk space utilization analysis)

## 6 Site Component Overview

The hackneys.com Family History web site consists of these primary components:

1. HTML pages created via Frontpage, Word and XL
2. Calendar pages generated by Calendar Creator Pro
3. Family Tree name roster page generated by phpGedView
4. Genealogical (family tree) phpGedView server application (family tree view, search, etc.)
5. Media server Gallery2 server application (photo, document, video, audio archives)

## 7 HTML Pages

The HTML pages for the hackneys.com Family History web site have been created by Douglas Hackney using MSFT Frontpage. The HTML pages use a stock Frontpage Cascading Style Sheet (CSS).

There is one php page that is edited using Notepad (media-archive.php). This php page is used to display a random photo from the Gallery2 media server on the main Historical Media Archives entry page on the site (index-archivephotos.htm).

The site uses a simple frames structure for the HTML pages. The site also uses a technique to allow direct addressing of frame displayed pages. Any page that is of the structure index- in the filename is a directly addressed frame display. This allows users to copy the web address from their browser and forward it, add it to favorites, etc. and always have it display the selected page(s) as they expect it. With normal frame design and file construction this is not possible. The special index- pages are created editing the "Frames Page HTML" code in Frontpage and changing the filename in the "main" frame source to directly address the desired page, i.e. src="photo-archives-roster.htm".

When creating a link on the menu for an index- page it is important to correctly select the target for the index- structure page, i.e. target="\_parent".

HTML pages are created and edited on the local PC and manually copied to the server via WS\_FTP Pro.

The HTML pages folder structure of the hackneys.com domain is fairly anarchic on both the PC and server side. This is an unfortunate result of undisciplined / unplanned development stretched over more than a decade. Apologies are offered to all who are required to navigate this haphazard structure and locate the various scattered files.

## 8 Calendar Pages

Calendar Creator Pro is used to generate HTML pages for upcoming years of family events. The pages are manually copied to the server via WS\_FTP Pro.

The Family Calendar link page on the hackneys.com site is manually created in XL and edited in Frontpage. It is then manually copied to the server via WS\_FTP Pro.

## 9 Family Tree Name Roster

phpGedView is used to generate the Family Tree Name Roster page. The steps are:

1. Start phpGedView by selecting the link from the hackneys.com Family Trees page.
2. Do not log in
3. Select Lists:Patriarchs

## 10 phpGedView Server Application

Notes:

1. All paths in the following section refer to the hackneys.com server.
2. All Control Panel images utilize the "New Control Panel Layout" option

### 10.1 phpGedView Overview

phpGedView is a php application that runs on the Linux server at the server hosting company. phpGedView provides very powerful Genealogical search, charting, reporting and analysis.

The main phpGedView site is: <http://www.phpgedview.net/> and contains full information on installation, documentation, etc.

This section will address only the hackneys.com specific functions required to setup and maintain the phpGedView system. Please see the main phpGedView site for all other information.

### 10.2 phpGedView System Technical Information

For advanced support and issue resolution you will need information on the full technical environment of the host server system. If you have already installed phpGedView there will be a file in the base directory of the application named phpinfo.php. Navigate your web browser to that file and select it. The resulting display contains the full technical information. If you have not yet installed phpGedView or the phpinfo.php file is not available:

1. Create a text file with the following contents: `<?php phpinfo(); ?>`
2. Save the text file and rename to phpinfo.php (With a php file extension rather than txt. You may need to enable viewing of file extensions in Windows Explorer via Tools:Folder Options:Hide Extensions for Known File Types.)
3. Copy the phpinfo.php file to the server. You can put it anywhere below the public\_html folder
4. Navigate your web browser to that location and select the file.

### 10.3 phpGedView Secure User Mode

The hackneys.com site uses phpGedView in a secure user mode. To minimize risk of identity theft, the system will not display any information for living persons to an unregistered user. Registered users have full access to the GEDCOM data file and can see all information on all records.

### 10.4 config.php Write Access

To ensure system security you must manually set read-only status on the config.php file in the phpGedView application folder once you are done configuring the system. Use the server's Bluehost File Manager, selected in the Bluehost Control Panel, to change this permission. Details of this process are included in the following phpGedView installation and setup section.

## **10.5 phpGedView Administration**

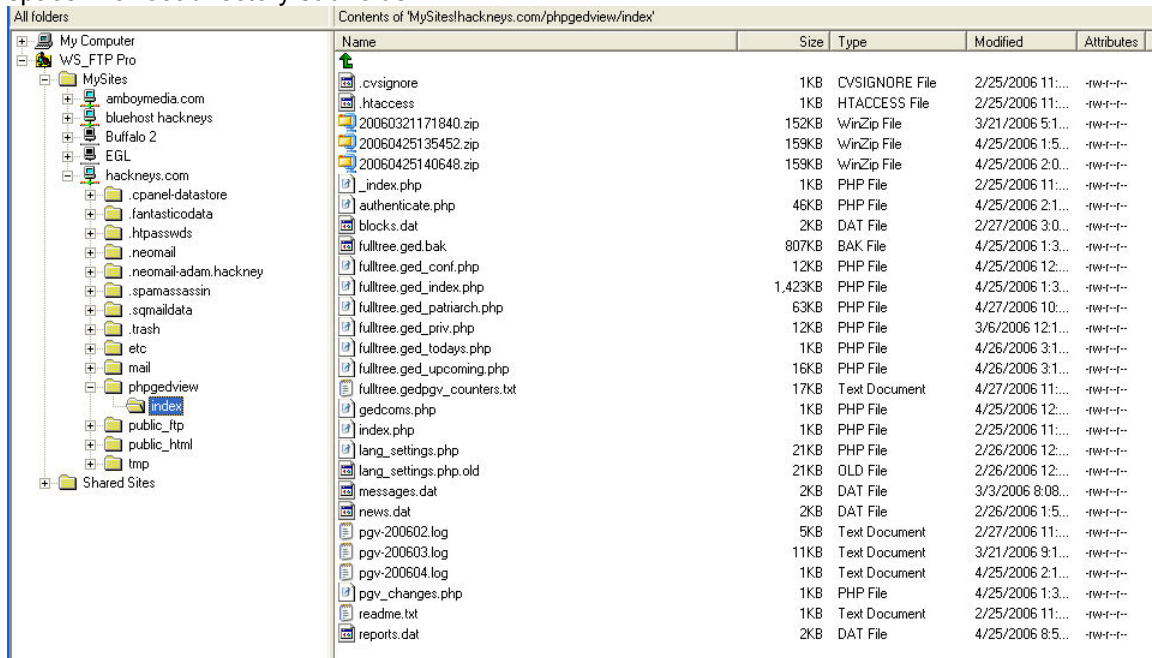

System administration requires administration rights for your user ID. To administer the system, start phpGedView, log on to the system and select Manage. Details on this process are included in the following section on phpGedView Installation and Setup.

# 11 phpGedView Installation and Setup

The installation and setup of phpGedView is relatively straightforward. The hackneys.com installation does not require any code modification or extensive customization of the user interface.

## 11.1 index.php Secure Location

The hackneys.com site follows the guidelines for secure setup of the phpGedView server application. This includes locating the main index file outside the publicly addressable HTML space in a root directory sub-folder.

The screenshot shows a file explorer window with the following table of contents:

Name	Size	Type	Modified	Attributes
.cvsignore	1KB	CVSIGNORE File	2/25/2006 11:...	-rw-r--r--

There are two ways to set the location of this file so the phpGedView application knows where to find it:

1. Editing the config.php file in the /public\_html/archives/phpgedview folder
2. Using the Configuration section of the management interface in the phpGedView application.

I used method #1 and cannot ensure that method #2 will work on an initial installation. Instructions for method #1 are included in the following section.

## 11.2 phpGedView Installation and Setup Steps

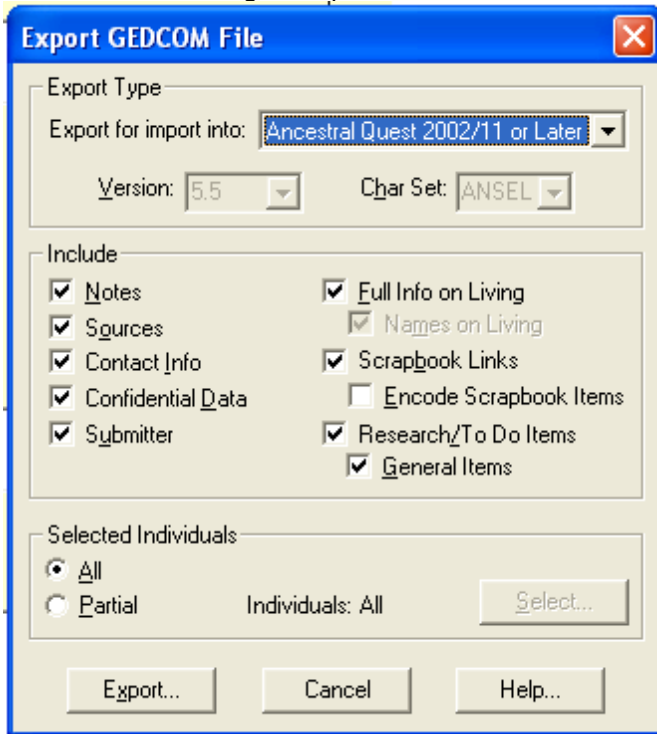

1. Perform the install into the /public\_html/archives/phpgedview folder. Please follow the application installation instructions at <http://www.phpgedview.net/>.
2. Manually create the root/phpgedview/index folder
3. Move the index.php file from the install directory to the index folder
4. Copy the config.php file from the install folder to your desktop using WS\_FTP Pro
5. Edit the config.php file to include the highlighted data:

```
/**
 * Absolut Path to PhpGedView installation
 *
 * this is mostly used when running PGV as a module under a NUKE environment
 * @global $PGV_BASE_DIRECTORY
 */
$PGV_BASE_DIRECTORY = ""; //-- path to phpGedView (Only needed when running as phpGedView from another php program such
$PGV_DATABASE = "index"; //-- which database is being used, file indexes or mysql
$dbtype = ""; //-- type of database to connect when using the PEAR:DB module
$dbhost = "localhost"; //-- Host where MySQL database is kept
$dbuser = ""; //-- MySQL database User Name
$dbpass = ""; //-- MySQL database User Password
$dbname = "phpgedview"; //-- The MySQL database name where you want PHPGedView to build its tables
$tableprefix = "pgv_"; //-- prefix to include on table names
$INDEX_DIRECTORY = "../..../phpgedview/index/"; //-- Readable and Writeable Directory to store index files (include the trai
$AUTHENTICATION_MODULE = "authentication_index.php"; //-- File that contains authentication functions
$PGV_STORE_MESSAGES = true; //-- allow messages sent to users to be stored in the PGV system
$PGV_SIMPLE_MAIL = false; //-- allow admins to set this so that they can override the name <emailaddress> combination in
$USE_REGISTRATION_MODULE = true; //-- turn on the user self registration module
$REQUIRE_ADMIN_AUTH_REGISTRATION = true; //-- require an admin user to authorize a new registration before a user can login
$ALLOW_USER_THEMES = true; //-- Allow user to set their own theme
$ALLOW_CHANGE_GEDCOM = true; //-- A true value will provide a link in the footer to allow users to change the gedcom they are vie
$logfile_create = "monthly"; //-- set how often new log files are created, "none" turns logs off, "daily", "weekly", "monthly", "
$PGV_SESSION_SAVE_PATH = ""; //-- Path to save PHP session Files -- DO NOT MODIFY unless you know what you are doing
//-- leaving it blank will use the default path for your php configuration as foun
$PGV_SESSION_TIME = "7200"; //-- number of seconds to wait before an inactive session times out
$SERVER_URL = "http://www.hackneys.com/archives/phpgedview/"; //-- the URL used to access this server
$LOGIN_URL = ""; //-- the URL to use to go to the login page, use this value if you want to redirect to a diffe
$PGV_MEMORY_LIMIT = "32M"; //-- the maximum amount of memory that PGV should be allowed to consume
$ALLOW_REMEMBER_ME = true; //-- whether the users have the option of being remembered on the current computer
$CONFIG_VERSION = "3.2"; //-- the PGV version that corresponds to this config schema

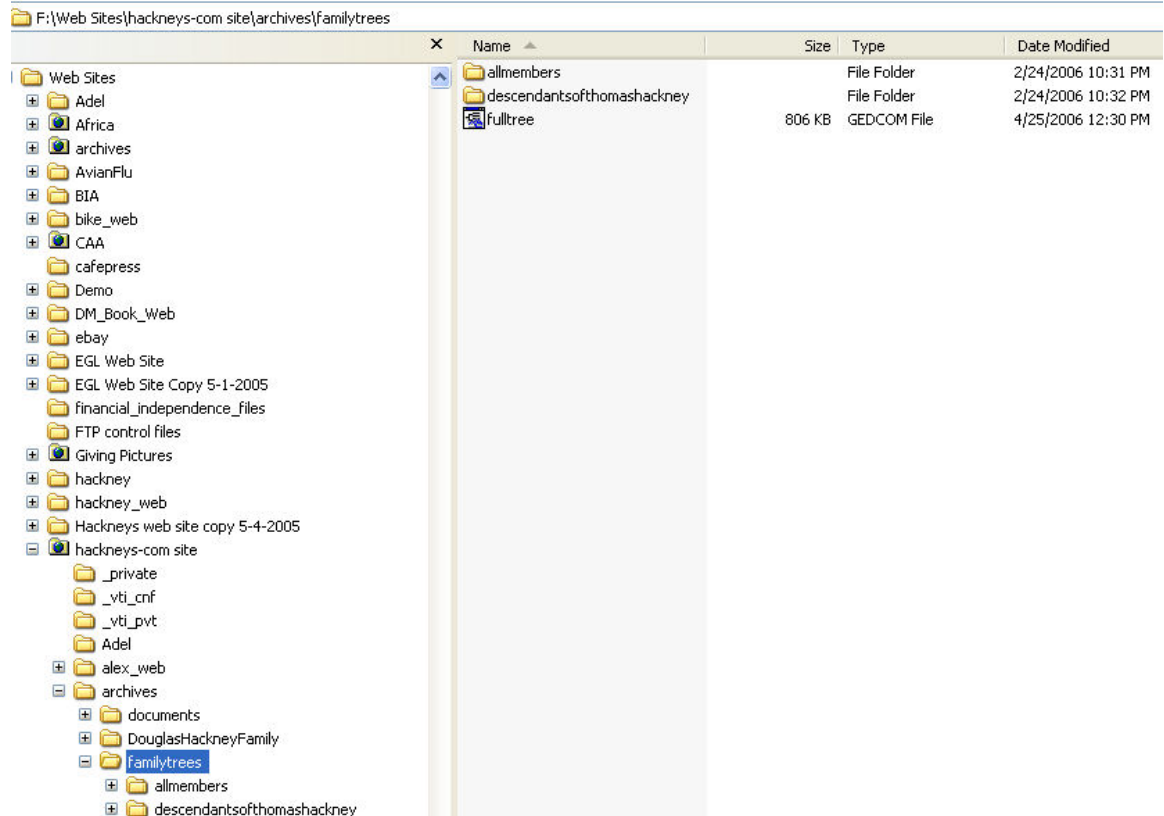

$CONFIGURED = true;
require_once($PGV_BASE_DIRECTORY."includes/session.php");
```

6. Copy the edited config.php file back to the installation directory
7. GEDCOM Data File Import - phpGedView relies on a GEDCOM data file that is created and maintained using Ancestral Quest on the PC. The GEDCOM file is exported from Ancestral Quest and manually copied to the server using WS\_FTP Pro. The GEDCOM file is then imported into phpGedView. There are three activities required for this operation, 1) prepare PC data files, 2) copy PC data files to the server and 3) import the GEDCOM file into phpGedView
8. Open Ancestral Quest
9. Open the Hackney family tree data file if it does not automatically load
10. Select File:Export

11. Ensure the dialog box options are selected as in this example:

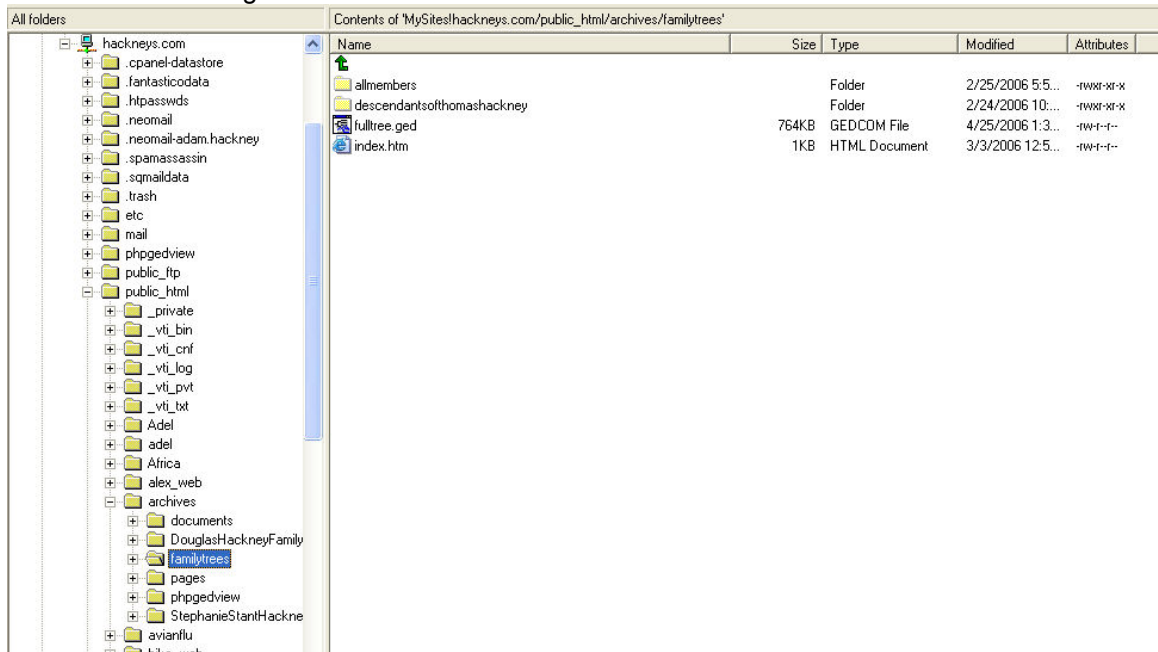

12. Export the GEDCOM file and save it as fulltree XXX.GED. Increment the file name number when you save it so that you do not overwrite the previous version.
13. Copy the GEDCOM file to the web pages/archives/family trees folder

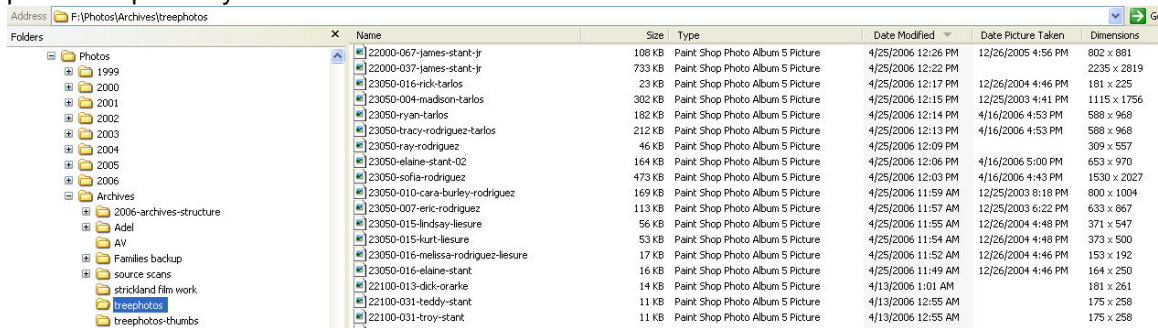

14. Delete the previous version fulltree.GED file
15. Rename the fulltree XXX.GED to fulltree.GED
16. Copy the fulltree.GED file to the server root/public\_html/archives/familytrees folder and overwrite the existing file

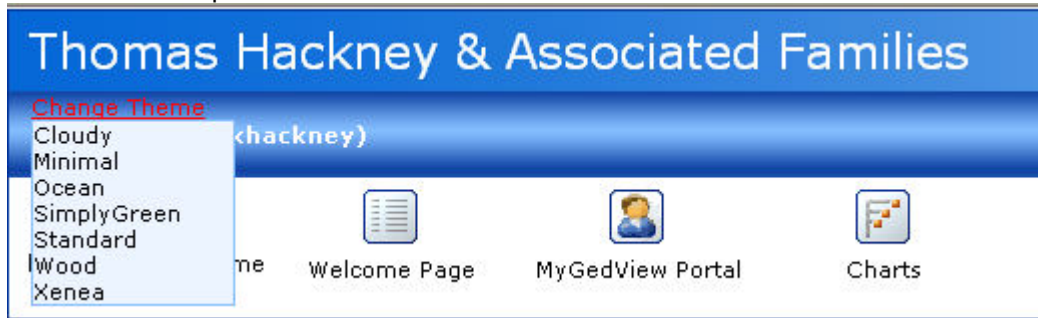

17. Ancestral Quest and phpGedView support the display of photos of people in the family tree. These photos are stored in two folders on the PC, photos/archives/treephotos and photos/archives/treephotos-thumbs, containing the full size and 175 pixel thumbnail photos respectively.

Copy the contents of these folders to the server to the root/archives/phpgedview/media (full size photos) and root/archives/phpgedview/media/thumbs (thumbnails) folders. (When you are doing an upgrade to a new version of the GEDCOM file after adding new people to it, copy any new photos contained in the newest version of the GEDCOM file up to the server folders.)

Name	Size	Type	Modified	Attributes

11110-lucille-wo-gav-newberry.jpg	257KB	Paint Shop Photo A...	3/12/2006 8:3...	-rw-r--r--

18. Open phpGedView by going to <http://www.hackneys.com/archives/pages/archives/index-familytrees.htm> and selecting the family tree link or directly to <http://www.hackneys.com/archives/phpgedview/index.php?>
19. Login to the system
20. Select the "Welcome Page" icon from the bar at the top of the screen
21. Use the "change theme" link to select "Xenea" as the theme to match the following dialog and screen examples

22. Select the Admin link

23. On the main Admin page, select “Manage GEDCOMs and edit Privacy”

## PhpGedView v3.3.8 final Administration

Current System Time: 27 April 2006 - 12:32:20pm

Select an option below:

32. Select "Save changes" as required for each value
33. Return to the phpGedView "Manage GEDCOMs and Edit Privacy" admin page

Current GEDCOMs

Default GEDCOM  Thomas Hackney & Associated Families

Add GEDCOM <input type="button" value="v"/>	Upload GEDCOM <input type="button" value="v"/>	Create a new GEDCOM <input type="button" value="v"/>	Return to the Admin menu
<b>Thomas Hackney &amp; Associated Families</b>			
GEDCOM title	fulltree.ged (699,40Kb)	Import	Delete
GEDCOM file	../../../../phpgedview/index/fulltree.ged_conf.php	Download	Create EXCEL (SLK) list
Configuration file	../../../../phpgedview/index/fulltree.ged_priv.php	Import	
Privacy file	None	Edit	
SearchLog files		Edit	

34. On the GEDCOM file line, select "Import"

35. The following dialog will appear. Select “yes” in the drop down lists, select “Do not change,” then select “Cleanup.”

### Step 3 of 4: Validate GEDCOM

Performing GEDCOM validation; select the necessary options then click **Cleanup**

Invalid place encodings were detected. These errors should be fixed. The following sample shows the invalid place that was detected:  
1 RELI  
2 PLAC Quaker

Cleanup Places  Yes

Detected invalid date formats, on cleanup these will be changed to format of DD MMM YYYY (eg. 1 JAN 2004).

Date Format:  Example of invalid date from your GEDCOM: DATE Februray 21, 1979

ANSI file encoding detected. PhpGedView works best with files encoded in UTF-8.

Convert this ANSI encoded GEDCOM to UTF-8?  Yes

### Optional Tools

You may also choose to run the following optional tools before importing.

Change Individual ID to:  Do not change

36. The following dialog will appear. Select “Yes”

### Step 4 of 4: Importing records into database

A GEDCOM with this file name has already been imported into the database. *fulltree.ged*.

Do you want to erase the old data and replace it with this new data?

37. The following dialog will appear. Select "Import Married Names."

### Step 4 of 4: Importing records into database

**Import complete**

Execution time: 2 sec.

[Click here to go the the Pedigree tree.](#)  
[Welcome Page](#)  
[Manage GEDCOMs and edit Privacy](#)

**Time limit: 60**

3'

Click the button below only if you want PhpGedView to calculate married names for female individuals in this GEDCOM. This will allow you to search and list females by their married names.

Import Married Names ?

For technical support or genealogy questions, please contact [Douglas Hackney](#)

Welcome Page   MyGedView Portal   Charts

51. Select the “Customize this GEDCOM welcome page” link in the upper right area of the page

52. Edit the values to match the following dialog and welcome page layout:

**CUSTOMIZE THIS GEDCOM WELCOME PAGE**  
 You can customize the page by positioning the blocks on the page the way that you want them.

The page is divided into **Main** and **Right** sections. The **Main** section blocks appear larger and under the page title. The **Right** section starts to the right of the title and goes down the right side of the page.

Each section has its own list of blocks that will be printed on the page in the order they are listed. You can add, remove, and reorder the blocks however you like.

When one of the block lists is empty, the remaining blocks will take up the whole width of the page.

Main Section Blocks	Right Section Blocks
GEDCOM News Block Login Block GEDCOM Statistics Block	GEDCOM Welcome Block Random Media Block On This Day Block Upcoming Events Block Logged In Users Block

hackneys.com Home Welcome Page MyGedView Portal Charts Lists Anniversary Calendar Reports Family Tree Clippings Cart Search Help

**News**  
**Welcome to the hackneys.com Family Tree Web Site**  
 26 February 2006 - 12:53:20am

This is a **secure** Genealogy family tree web site for the descendants of Thomas Hackney (born about 1600) and associated families.

This web site will display charts to show you your ancestors, descendants and relationship to any family member as well as many other powerful capabilities.

You can export portions of the underlying GEDCOM database via the Family Tree Clippings Cart for inclusion in your own research.

Guests can view information for all non-living members of the family tree. Guest users can use most functions of the site, but cannot see any information on family tree members who are still living.

>>> **Guest users DO NOT need to login.** <<<

Registered family members can view information for all members of all family trees by obtaining an authenticated User ID and Password from Douglas Hackney at the link at the bottom of the page.

>>> **Registered family member users please log in using the dialog box below this message.** <<<

Please contact Douglas Hackney with any questions, comments, corrections or additions to the family tree information.

57. Start the File Manager and navigate to the root/public\_html/archives/phpgedview folder by double clicking on the folder icons. Locate the config.php file.

58. Select the file by clicking on the config.php file name. The following dialog will appear in the upper right corner of the window:

59. Select "Change Permissions."

60. Edit the settings until the dialog matches this example:

config.php

Mode	User	Group	World
Read	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Write	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Execute	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Permission	4	4	4

Change

61. Select the "Change" button

62. Close the File Manager and Control Panel windows

63. Return to the main phpGedView admin page

**PhpGedView v3.3.8 final  
Administration**

Current System Time: 27 April 2006 - 12:32:20pm

Select an option below:

Informational	
<a href="#">README documentation</a>	<a href="#">PHPInfo</a>
<a href="#">View other sites using PhpGedView</a>	<a href="#">Version 3.3.8 Changes</a>
Data and GEDCOM administration	
<a href="#">Manage GEDCOMs and edit Privacy</a>	<a href="#">Merge Records</a>
<a href="#">Add an unlinked person</a>	
<a href="#">Upload Media files</a>	
Site administration	
<a href="#">Configuration</a>	<a href="#">User Information Migration tool</a>
<a href="#">User Administration</a>	<a href="#">Backup</a>
<a href="#">Edit and configure language files</a>	View log files: <input type="text" value="pgv-200604.log"/> <input type="button" value="v"/> <input type="button" value="&gt;"/>

64. From the Site Administration section, select "Backup."

65. Ensure the dialog matches the following example:

**Backup**

This tool can make a backup of several kinds of data in PhpGedView.

The data you choose to back up will be gathered into a ZIP file, which you can download by clicking the link at the bottom of the page, after the backup has been successfully made.

The ZIP file will remain in your Index directory until you remove it manually.

**Options:**

- PhpGedView Configuration File
- GEDCOM Files
- GEDCOM Settings, Configuration and Privacy files
- GEDCOM Counters, SearchLogs and PhpGedView Logfiles
- User definitions, Block settings, Favorites, Messages, News

66. Select “Make Backup”

67. The following dialog will appear. Select the link for “Download the ZIPped backup file”

**Backup**

This tool can make a backup of several kinds of data in PhpGedView.

The data you choose to back up will be gathered into a ZIP file, which you can download by clicking the link at the bottom of the page, after the backup has been successfully made.

The ZIP file will remain in your Index directory until you remove it manually.

ZIP file successfully created.

[Download ZIPped backup file ../../../phpgedview/index/20060425140648.zip \(158 Kb\)](#)

[Return to the Admin menu](#)

For technical support or genealogy questions, please contact [Douglas Hackney](#)

68. Save the file into the PC phpGedView Backup folder.

69. phpGedView installation and setup is now complete.

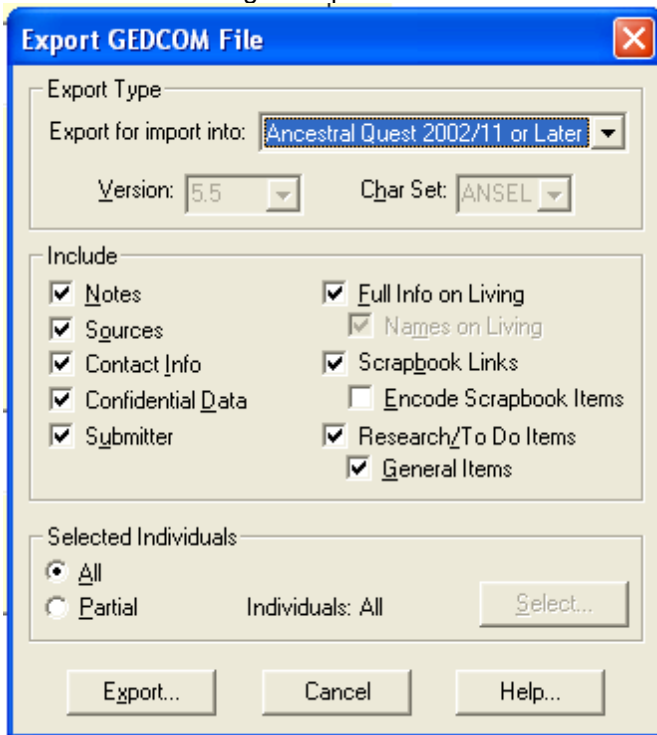

## 12 phpGedView Maintenance and Update

### 12.1 Updating the GEDCOM file

As new information, photos, etc. are added to the master PC Ancestral Quest data file, it will be necessary to periodically upload the new photos and GEDCOM data file to the server.

GEDCOM Data File Import - phpGedView relies on a GEDCOM data file that is created and maintained using Ancestral Quest on the PC. The GEDCOM file is exported from Ancestral Quest and manually copied to the server using WS\_FTP Pro. The GEDCOM file is then imported into phpGedView. There are three activities required for this operation, 1) prepare PC data files, 2) copy PC data files to the server and 3) import the GEDCOM file into phpGedView

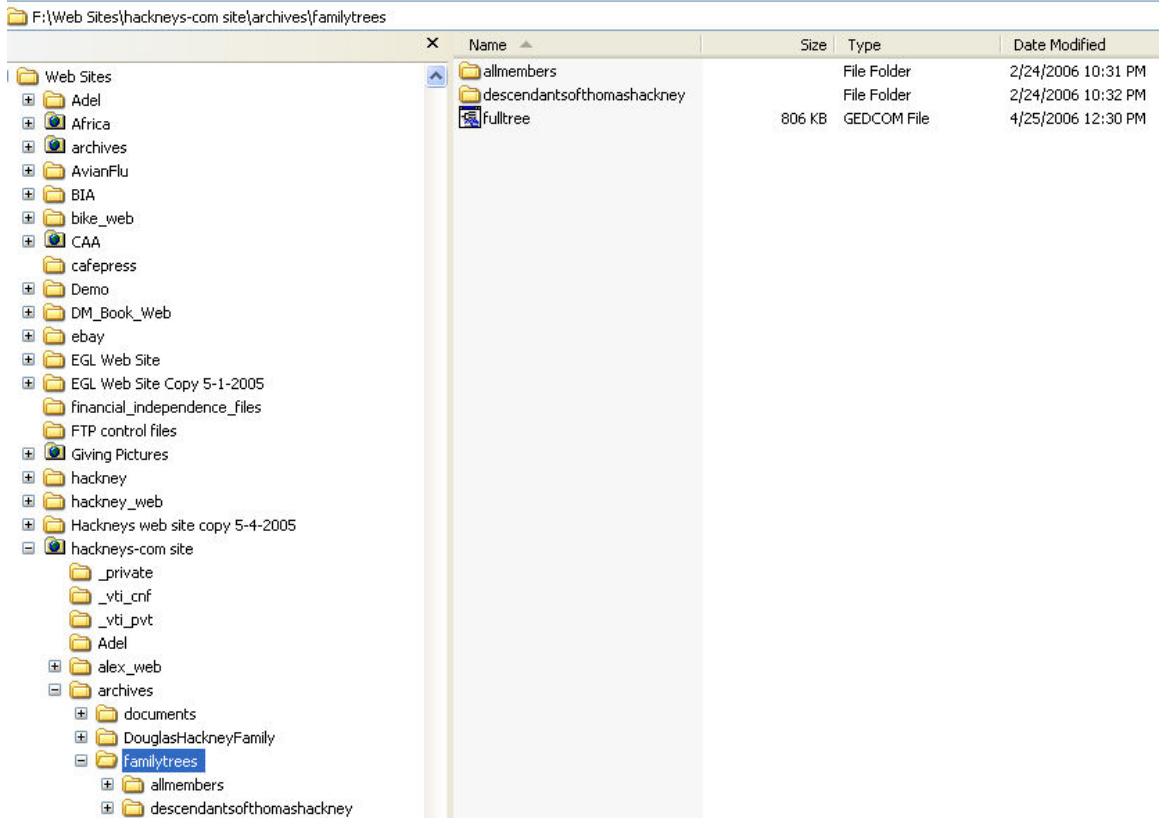

1. Open Ancestral Quest
2. Open the most current version of the Hackney family tree data file if it does not automatically load
3. Select File:Export
4. Ensure the dialog box options are selected as in this example:

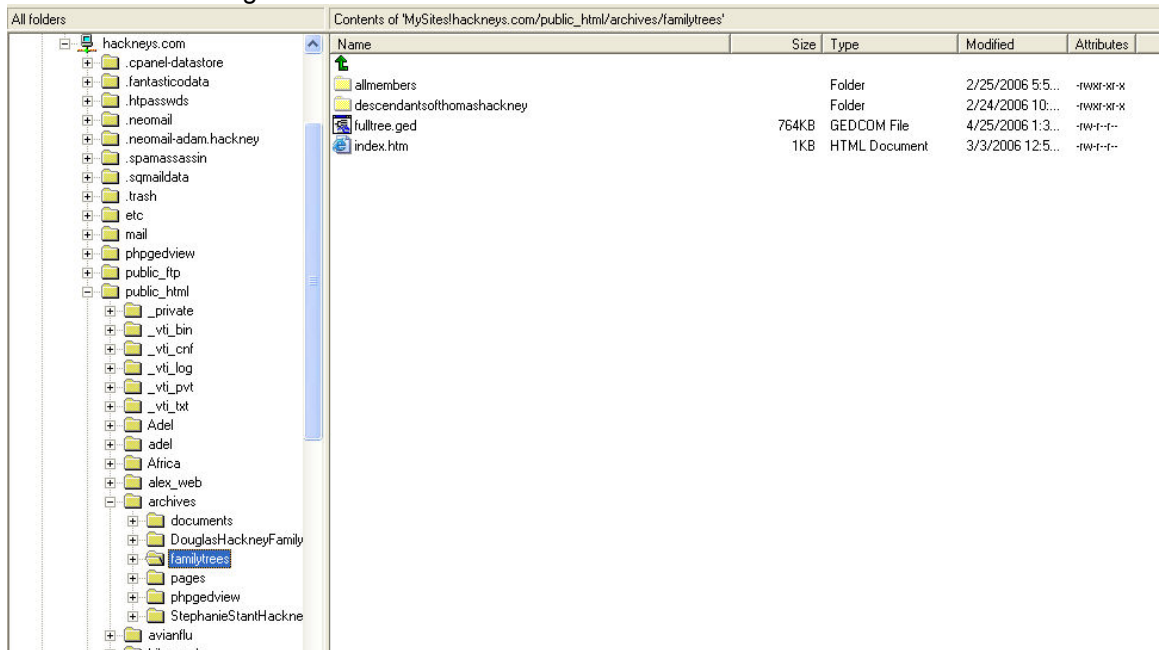

5. Export the GEDCOM file and save it as fulltree XXX.GED. Increment the file name number when you save it so that you do not overwrite the previous version.

6. Copy the GEDCOM file to the web pages/archives/family trees folder

7. Delete the previous version fulltree.GED file
8. Rename the fulltree XXX.GED to fulltree.GED
9. Copy the fulltree.GED file to the server root/public\_html/archives/familytrees folder and overwrite the existing file

- Ancestral Quest and phpGedView support the display of photos of people in the family tree. These photos are stored in two folders on the PC, photos/archives/treephotos and photos/archives/treephotos-thumbs, containing the full size and 175 pixel thumbnail photos respectively.

- Open phpGedView by going to <http://www.hackneys.com/archives/pages/archives/index-familytrees.htm> and selecting the family tree link or directly to <http://www.hackneys.com/archives/phpgedview/index.php>
- Login to the system

13. Select Admin

## PhpGedView v3.3.8 final Administration

Current System Time: 27 April 2006 - 12:32:20pm

Select an option below:

Informational	
<a href="#">README documentation</a>	<a href="#">PHPInfo</a>
<a href="#">View other sites using PhpGedView</a>	<a href="#">Version 3.3.8 Changes</a>
Data and GEDCOM administration	
<a href="#">Manage GEDCOMs and edit Privacy</a>	<a href="#">Merge Records</a>
<a href="#">Add an unlinked person</a>	
<a href="#">Upload Media files</a>	
Site administration	
<a href="#">Configuration</a>	<a href="#">User Information Migration tool</a>
<a href="#">User Administration</a>	<a href="#">Backup</a>
<a href="#">Edit and configure language files</a>	View log files: <input type="text" value="pgv-200604.log"/> <input type="button" value="v"/> <input type="button" value="&gt;"/>

14. On the main Admin page, select "Manage GEDCOMs and edit Privacy"

Current GEDCOMs

Default GEDCOM

<a href="#">Add GEDCOM</a> <input type="button" value="?"/>	<a href="#">Upload GEDCOM</a> <input type="button" value="?"/>	<a href="#">Create a new GEDCOM</a> <input type="button" value="?"/>	<a href="#">Return to the Admin menu</a>
<b>GEDCOM title</b>	<b>Thomas Hackney &amp; Associated Families</b>		
GEDCOM file	fulltree.ged (693.40Kb)	Import	Delete
Configuration file	../../../../phpgedview/index/fulltree.ged_conf.php	Edit	Download
Privacy file	../../../../phpgedview/index/fulltree.ged_priv.php	Edit	<a href="#">Create EXCEL (SLK) list</a>
SearchLog files	None		

15. On the GEDCOM file line, select "Import"

16. The following dialog will appear. Select “yes” in the drop down lists, select “Do not change,” then select “Cleanup.”

### Step 3 of 4: Validate GEDCOM

Performing GEDCOM validation; select the necessary options then click **Cleanup**

Invalid place encodings were detected. These errors should be fixed. The following sample shows the invalid place that was detected:  
1 RELI  
2 PLAC Quaker

Cleanup Places  Yes

Detected invalid date formats, on cleanup these will be changed to format of DD MMM YYYY (eg. 1 JAN 2004).

Date Format:  Example of invalid date from your GEDCOM: DATE Februray 21, 1979

ANSI file encoding detected. PhpGedView works best with files encoded in UTF-8.

Convert this ANSI encoded GEDCOM to UTF-8?  Yes

### Optional Tools

You may also choose to run the following optional tools before importing.

Change Individual ID to:  Do not change

17. The following dialog will appear. Select “Yes”

### Step 4 of 4: Importing records into database

A GEDCOM with this file name has already been imported into the database. *fulltree.ged*.

Do you want to erase the old data and replace it with this new data?

18. The following dialog will appear. Select "Import Married Names."

### Step 4 of 4: Importing records into database

**Import complete**

Execution time: 2 sec.

[Click here to go the the Pedigree tree.](#)  
[Welcome Page](#)  
[Manage GEDCOMs and edit Privacy](#)

**Time limit: 60**

3'

Click the button below only if you want PhpGedView to calculate married names for female individuals in this GEDCOM. This will allow you to search and list females by their married names.

Import Married Names ?

For technical support or genealogy questions, please contact [Douglas Hackney](#)

[Printer-friendly Version](#) ?

21. Copy any new photos to the server media folders (see next section)

22. Check all new entries and photos

## 12.2 phpGedView Photos

All photos used in the phpGedView system are manually created and edited using Paint Shop Pro and stored in two separate folders on the PC, photos/archives/treephotos for full size images and photos/archives/treephotos-thumbs for the 175 pixel thumbnails.

Address F:\Photos\Archives\treephotos

Folders	Name	Size	Type	Date Modified	Date Picture Taken	Dimensions

## 13 Gallery Server Application

### 13.1 Gallery Overview

All historical media (photos, scanned documents, video and audio) for the hackneys.com family history site is hosted at the amboymedia.com domain and is managed and delivered in the server Gallery application.

The current system information of the installation is:

Gallery version = 2.1.1 core 1.1.0.1  
PHP version = 4.4.1 cgi  
Webserver = Apache/1.3.34 (Unix) mod\_fastcgi/2.4.2 mod\_auth\_passthrough/1.8  
mod\_log\_bytes/1.2 mod\_bwlimited/1.4 FrontPage/5.0.2.2635 mod\_ssl/2.8.25 OpenSSL/0.9.7a  
PHP-CGI/0.1b  
Database = mysql 4.1.14-standard-log, lock.system=flock  
Toolkits = ArchiveUpload, Exif, NetPBM, SquareThumb, Thumbnail, Gd, ImageMagick  
Acceleration = full/86400, full/86400  
Operating system = Linux box93.bluehost.com 2.6.9-34.106.unsupported SMP #1 SMP Sat Mar 18  
16:22:41 CST 2006 x86\_64  
Default theme = sirius  
Locale = en\_US  
Browser = Mozilla/4.0 (compatible; MSIE 6.0; Windows NT 5.1; SV1; .NET CLR 1.1.4322)

### 13.2 Gallery Support Site

The main Gallery web site is: <http://gallery.menalto.com/>

The main Gallery help/support site is: <http://gallery.menalto.com/support>

Please use the Gallery web sites for general information regarding installation, utilization, etc. This documentation addresses hackneys.com/amboymedia.com specific implementation installation and configuration.

### 13.3 Gallery System Technical Information

For advanced support and issue resolution you will need information on the full technical environment of the host server system. If you have already installed Gallery and restored the base folder files there will be a file in the base directory of the application named phpinfo.php. Navigate your web browser to that file and select it. The resulting display contains the full technical information.

If you have not yet restored Gallery or the phpinfo.php file is not available:

1. Create a text file with the following contents: `<?php phpinfo(); ?>`
2. Save the text file and rename to phpinfo.php (With a php file extension rather than txt. You may need to enable viewing of file extensions in Windows Explorer via Tools:Folder Options:Hide Extensions for Known File Types.)
3. Copy the phpinfo.php file to the server. You can put it anywhere in or below the public\_html folder
4. Navigate your web browser to that location and select the file.

## **13.4 Gallery Administration**

System administration requires administration rights for your user ID. To administer the system, start Gallery and log on to the system. The administrative menu options will now be available (Site Admin, Edit Album and Edit Photo). Details on this process are included in the following Gallery Installation and Setup section.

## 14 Gallery Installation and Setup

The installation and setup of the Gallery system is more complex than the phpGedView system. The Gallery system houses all of its non-image file data in a server resident MySQL database and the image files are stored in a folder structure on the server. A full rebuild of the hackneys.com historical media archives would be a Herculean task. This documentation assumes that a backup copy of the database and the system data file folders is available.

Note:

1. All paths in the following steps refer to the amboymedia.com server
2. All Control Panel images use the "New Layout" option

### 14.1 Gallery Installation and Setup Steps

1. Open a web browser window at [www.bluehost.com](http://www.bluehost.com)
2. Log on using the amboymedia.com domain logon

The image shows a screenshot of the Bluehost website's login interface. On the left, the Bluehost logo is displayed with the tagline "Affordable, Reliable Web Hosting Solutions." In the center, a blue box contains the text "NOW HOSTING OVER 125,000 DOMAINS". On the right, there is a login form with the following fields:

- Domain:
- Password:
- CONTROL PANEL LOGIN

- From the Control Panel, select MySQL Databases.

The screenshot shows the cPanel control panel interface. On the left, there are two tables: 'General account information' and 'General server information'. The right side features several categorized toolboxes: 'Account Management', 'Domains', 'Addons / Plugins', 'Stats / Logs', 'Site Management', 'Web Server Config', 'Databases', and 'System Tools'. At the bottom right, there is a link to the old control panel layout.

General account information:	
Hosting package	Platinum Pak
Shared Ip Address	70.103.189.93
Subdomains	0 / 20
Parked Domains	0 / 20
Addon Domains	0 / 5
MySQL Databases	1 / 50
Postgre Databases	0 / 50
Disk usage	5923.92 Megabytes
SQL Disk usage	16.08 Megabytes
Disk space available	4076.08 Megabytes
Bandwidth usage (current month)	7493.20 Megabytes
Email Accounts	0 / 2500
Email Forwarders	0
Autoresponders	0

- Process Manager
- SSL Manager
- Manage OpenPGP Keys
- Disk usage
- Cron jobs
- Network Tools
- Search Engine Submit

If you would prefer to use our old Control Panel Layout  
[Please Click Here](#)

- Create the mySQL database, the database user and assign the user to the database for the Gallery system.
- There will be three steps in this process using the MySQL dialog. First, enter the database name. This can be any name, but something specific to Gallery will make support more logical, i.e. gallery or grl. Enter the name and select "Add Db."

Db:

- Next, create a user for the Gallery database. This can be any name up to seven characters, but something related to gallery will make support more logical, i.e. galuser or grluser, etc. It is more secure if you use a combination of characters, special characters

and numbers for the password. Enter the user name and password and select “Add User”

**Users:**  
hackneys\_gllr1 [Delete](#)

*Username may not be longer than seven characters*

UserName:

Password:

7. You will need the database name, user name and password during the Gallery installation process, so make a note of them.
8. Lastly, you must explicitly add the user to the database. Select the database and the user from the drop down list and select “Add User to Db.”

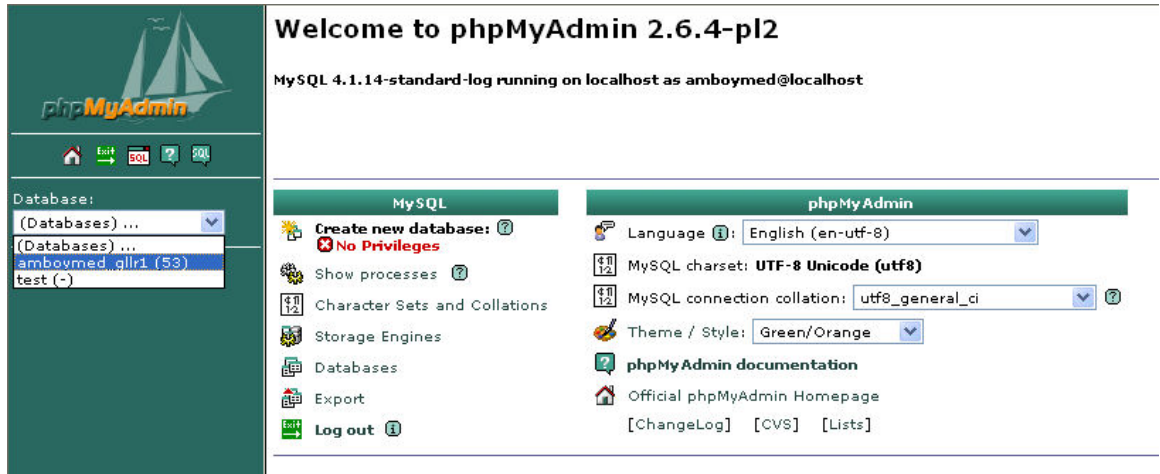

User:  Db:

Privileges:  ALL  ALTER  CREATE TEMPORARY TABLES

CREATE  DELETE  DROP  SELECT  INSERT  UPDATE

REFERENCES  INDEX  LOCK TABLES

- Next import the backup copy of the hackneys.com Gallery2 database. Click “Go Back” or “Home” to return to the bluehost.com Control Panel. Select “phpMyAdmin.” When the phpMyAdmin dialog opens, there will be a drop down list in the upper left corner. In that drop down list, select the mySQL Gallery database that you created in the previous section.

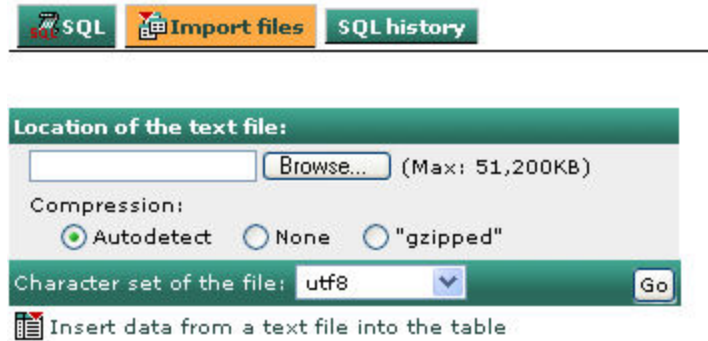

- In the DB table dialog select the “SQL” icon above the database drop down list in the upper left corner. Select the small SQL icon under the ship graphic, not the large SQL button in the top center row of buttons.

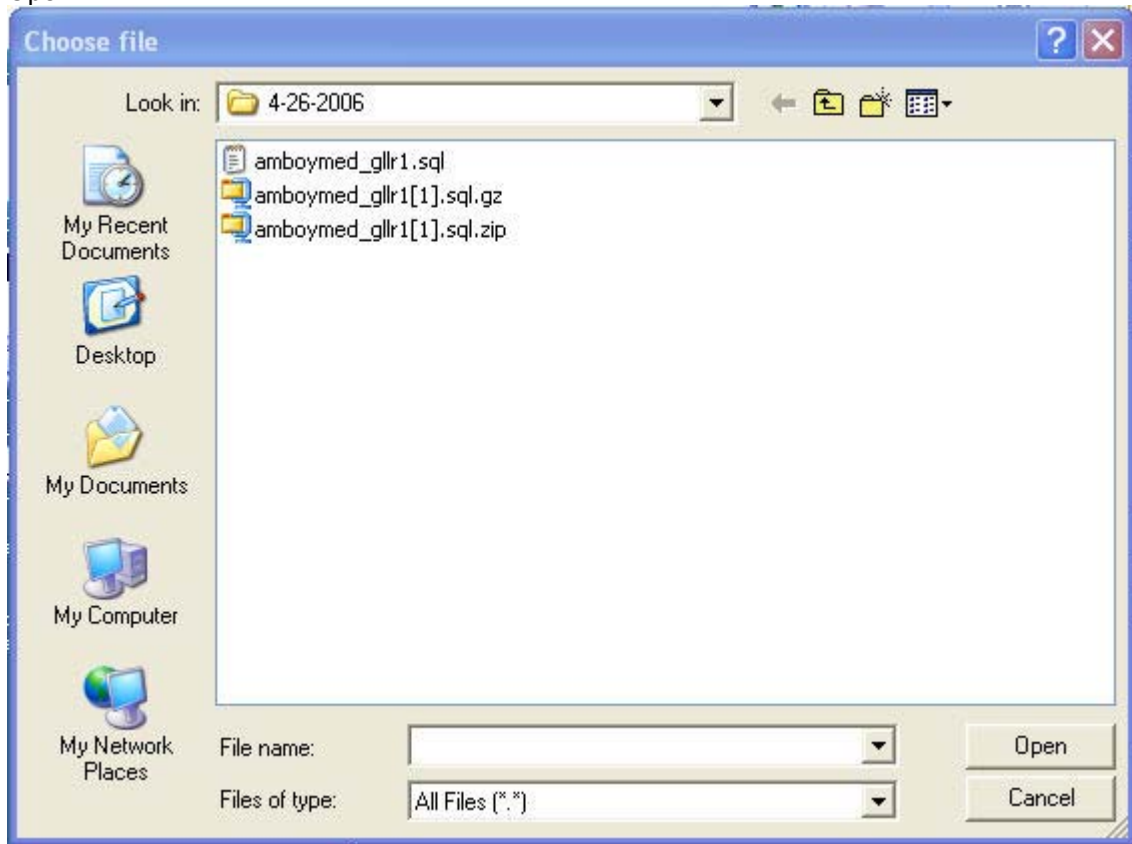

11. In the SQL dialog, select "Import files."

12. In the text file location dialog, click on "Browse."

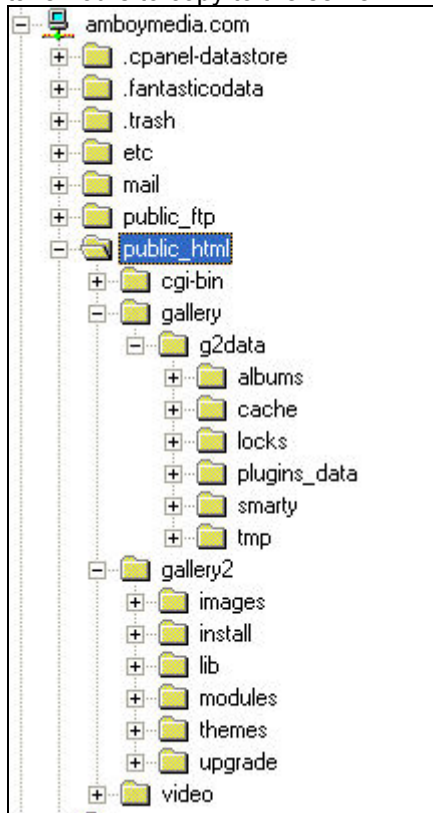

13. In the file location dialog box, navigate to the folder where the amboymedia.com Media Archives mySQL database backup file is located and select "Open."

14. In the file location dialog, select "go."
15. It will take a while for the file to be transferred from your PC to the server and imported into the database. The status bar will indicate that the read\_dump.php page is being loaded. Watch your progress bar in the lower right portion of your screen.

- Using WS\_FTP Pro, copy the backup Gallery folder containing the media and Gallery application data files from your PC to the root/public\_html folder to restore the system image (photos and documents) data and application data files. The image data and system data files are contained in the g2data folder structure. This file copy process will take a long time to execute unless you have a very, very fast upstream connection. The Gallery application data file folder structure contains hundreds of tiny data files that can take hours to copy to the server.

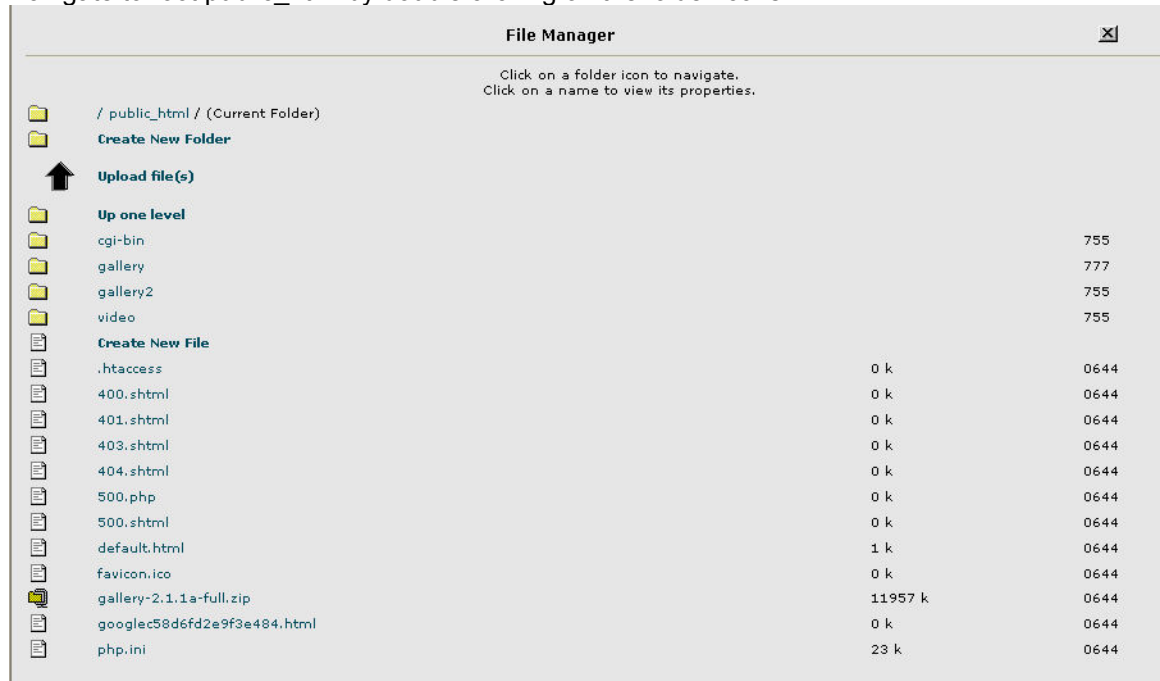

- Download the Gallery application from the main Gallery web site <http://gallery.menalto.com/>
- Copy the zip file to the root/public\_html folder on the amboymedia.com server
- Log onto the amboymedia.com domain at [www.bluehost.com](http://www.bluehost.com) to start the Control Panel

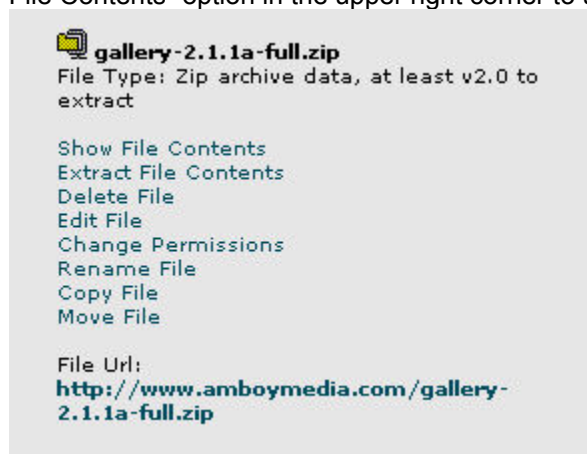

- Select File Manager

21. Navigate to root/public\_html by double clicking on the folder icons

22. Click once on the "gallery-2.1.1a-full.zip" file name

23. The following dialog will appear in the upper right corner of the page. Select the "Extract File Contents" option in the upper right corner to unzip the file

24. The unzip process will create the Gallery2 folder structure and the application files.

25. Using your web browser, navigate to [www.amboymedia.com/public\\_html/gallery2/install/index.php](http://www.amboymedia.com/public_html/gallery2/install/index.php). This page will start the install process.

26. During the installation process you will need to enter the location of the Gallery media data files. That path is /public\_html/gallery/g2data.

27. During the installation process you will create an administrator user ID and password. Make a note of them as you will need them to maintain and administer the site.

28. The hackneys.com Historical Media Archives makes use of customizations of the standard Gallery SiriuX user interface templates. These customized files must be copied from the PC backup folders to the server.

29. The necessary files are already edited and modified in the backup file folder structure. If for any reason these files are not available, copy the original installation files from the server to the PC and make the following edits.
- a. In the themes.css file found in the root/public\_html/gallery2/themes/sirius folder, include the following highlighted code:

```

Views
theme.css
background: #ffe;
font-size: 1.2em;
}

/* -- Gallery Photo (detail page) ----- */
div.gallery-photo {
text-align: center;
}

img.gallery-photo {
background: #f3f3f3;
border: 1px solid #ddd;
padding: 7px;
-moz-border-radius: 3px;
}

#prevArrow img, #nextArrow img {
border-style: none;
}

/* -- Navigator --Page Number Direct Navigation-- */

.block-core-Pager {
float: left;
margin: 1.5em 0;
font-size: 0.9em;
color: #999;
}

/* -- Navigator ----- */

.block-core-Navigator {
float: right;
margin: 1.5em 0;
font-size: 0.9em;
color: #333;
}

.block-core-Navigator .current,
.block-core-Navigator .first-and-previous,
.block-core-Navigator .next-and-last {
display: inline;
}

.block-core-Navigator .current {
margin: 0 0.5em;
}

```

- b. In the albums.tpl file found in root/public\_html/gallery2/themes/sirius/templates/local include the following highlighted code (note that you will need to create the local folder if it does not exist):

```
{* Navigator *}
```

```
{if $theme.totalPages > 1}
{g->block type="core.Pager"}
{/if}
```

```
{if $theme.totalPages > 1}
{g->block type="core.Navigator" navigator=$theme.navigators prefix="&laquo; " suffix=" &raquo;"
currentPage=$theme.currentPage totalPages=$theme.totalPages}
{/if}
```

```
{* Description *}
{if !empty($theme.item.description)}
<hr />
<p>{$theme.item.description|markup}</p>
{/if}
```

- c. In the photo.tpl file found in root/public\_html/gallery2/themes/sirius/templates/local include the following highlighted code (note that you will need to create the local folder if it does not exist):

```
{*
 * $Revision: 1.11 $
 * If you want to customize this file, do not edit it directly since future upgrades
 * may overwrite it. Instead, copy it into a new directory called "local" and edit that
 * version. Gallery will look for that file first and use it if it exists.
 *}
{if !empty($theme.imageViews)}
{assign var="image" value=$theme.imageViews[$theme.imageViewsIndex]}
{/if}

<h2>{$theme.item.title|markup}</h2>
```

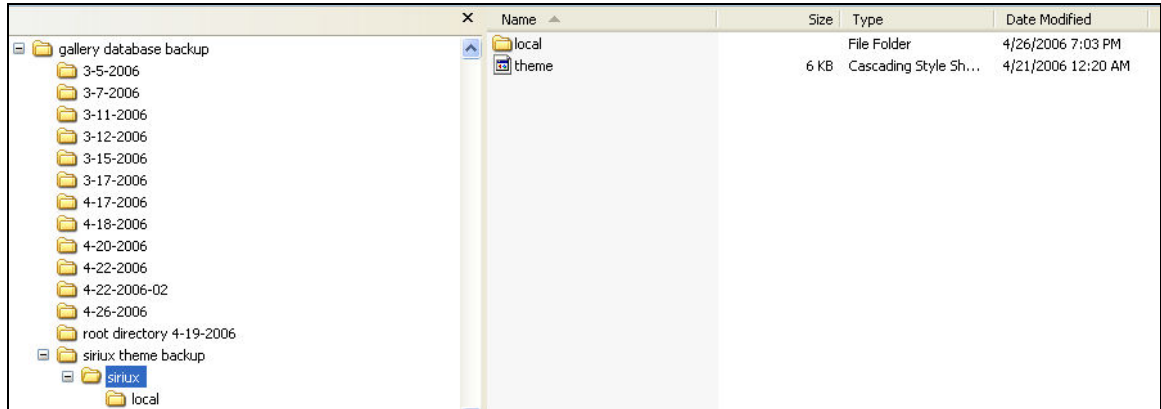

```
<p align="center">Click on left half of image for previous, click on right half of image for next.</p>
```

```
{* Navigator *}
```

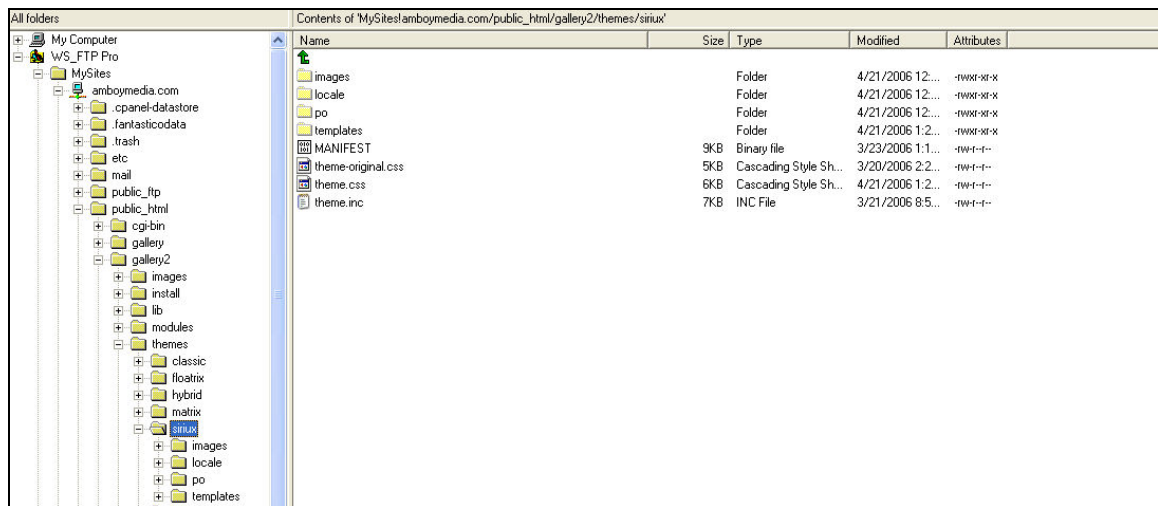

```
{if !empty($theme.navigators)}
{g->callback type="core.LoadPeers" item=$theme.item windowSize=1}
{g->block type="core.Navigator" navigator=$theme.navigators prefix="&laquo; " suffix=" &raquo;"
currentItem=$block.core.LoadPeers.thisPeerIndex totalItems=$block.core.LoadPeers.peerCount}
{/if}
```

```
{if !empty($theme.imageViews)}
{capture name="fallback"}
<a href="{g->url arg1="view=core.DownloadItem" arg2="itemId=`$theme.item.id`"
forceFullUrl=true forceSessionId=true}">
{g->text text="Download %s" arg1=$theme.sourceImage.itemTypeName.1}
</a>
{/capture}
```

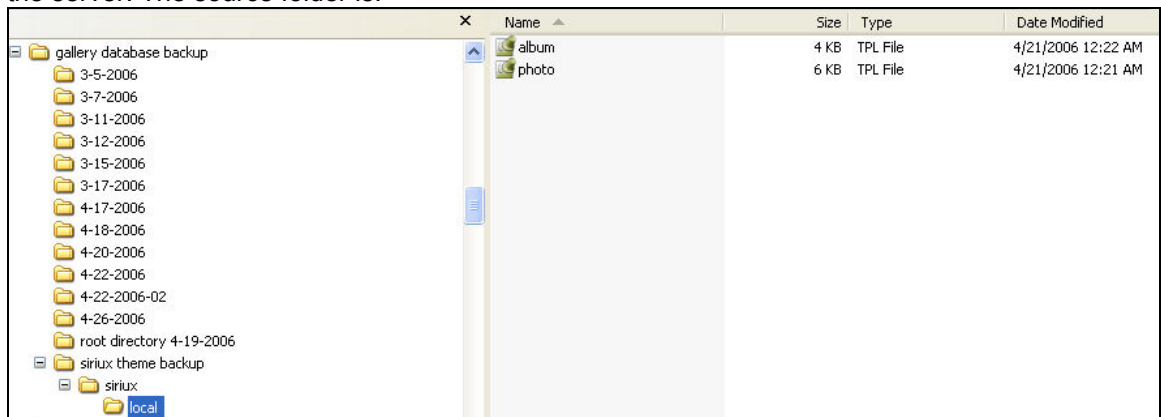

30. Copy the theme.css cascading style sheet file from the PC backup siriux folder to the server. The source folder is:

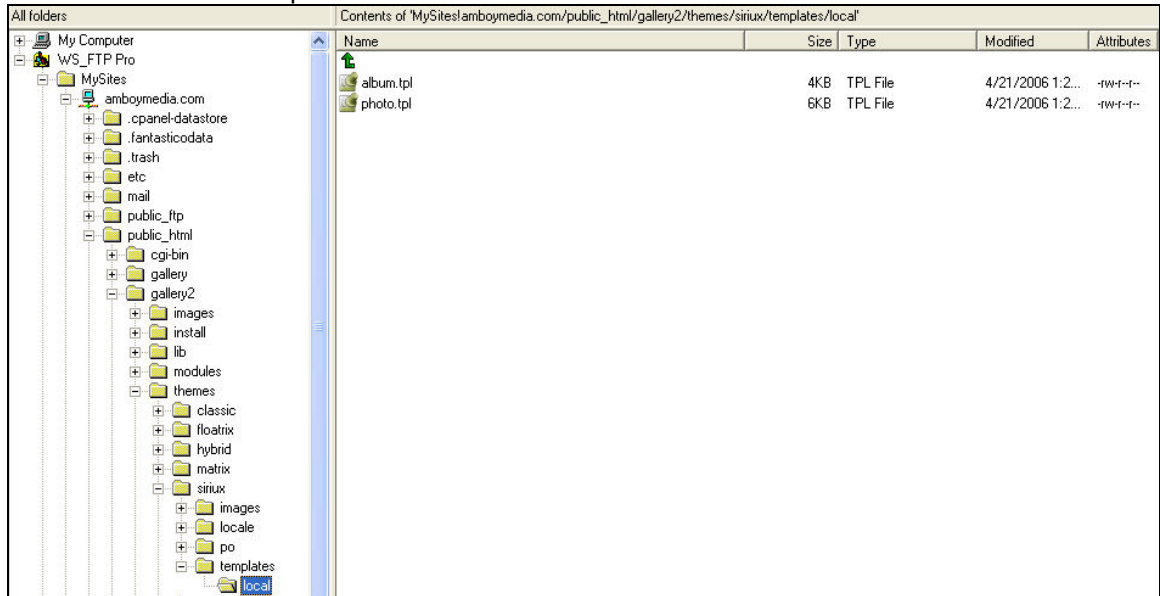

The target folder is:

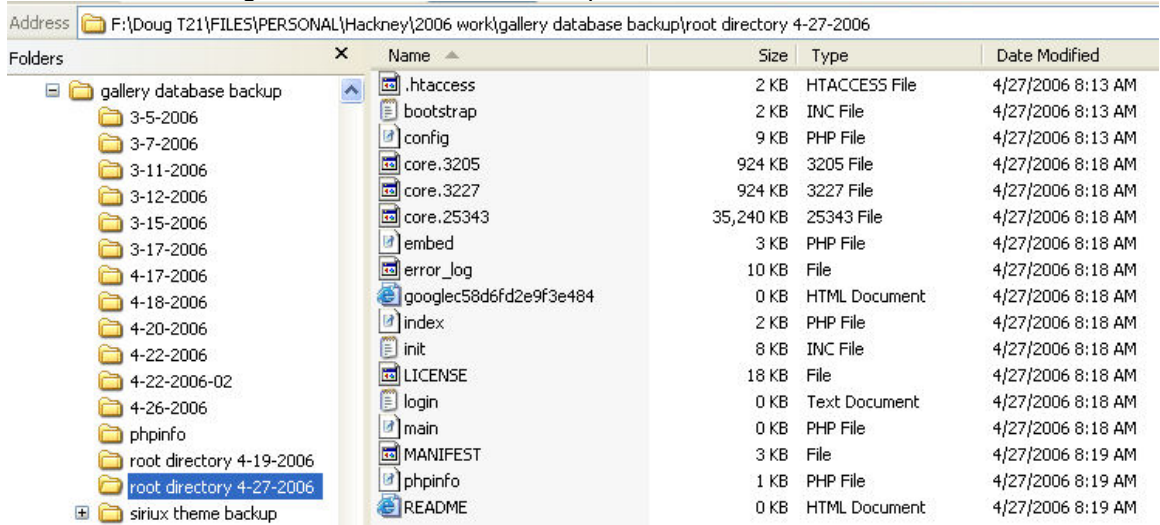

31. Copy the local album and photo template folder from the PC backup siriux/local folder to the server. The source folder is:

32. The target folder follows. Note that the target is the `public_html/galler2/themes/sirius/templates` folder. You will need to copy the entire local folder into the `sirius/templates` folder.

33. The last step in restoring the `hackneys.com` Historical Media Archives Gallery system is to restore the files in the base `gallery2` directory. Copy the contents of the backup `gallery2` base folder to the `amboymedia.com` root/`public_html/gallery2` folder and overwrite the existing contents. Source PC backup files are:

Target amboymedia.com root/public\_html/gallery2 folder is:

34. The hackneys.com Historical Media Archives Gallery installation should now be restored. Use the following steps to ensure that the system is properly configured.
35. Start the Gallery application by using the links at <http://www.hackneys.com/archives/pages/archives/index-archivephotos.htm> or address it directly at <http://www.amboymedia.com/gallery2/main.php>
36. Note that when making any changes or setting any value in the administration of the Gallery system you MUST select “Save” for the settings to take effect.
37. Note that because the Gallery system is set to cache web pages on the server while performing administrative changes to the user interface you often must hold

down the CNTRL key and simultaneously select the refresh icon to force a full cache flush and refresh of the displayed Gallery page in order to display the changes.

38. Select “login” and use the administrator login you created during the installation process.

46. Confirm the General settings match the following:

[hackneys.com](http://hackneys.com) [Historical Media Archives](#)

---

### General Settings

---

#### Language Settings

Select language defaults for Gallery. Individual users can override this setting in their personal preferences or via the language selector block if available. Gallery will try to automatically detect the language preference of each user if the browser preference check is enabled.

Default language English (US) ▾

Check Browser Preference

---

#### Date Formats

Specify how dates and times are displayed by Gallery. See [php.net](http://php.net) for details of how to enter a format string. Note that the display of some tokens varies according to the active language.

Style	Format	Sample
Date	<input type="text" value="%x"/>	04/26/2006
Time	<input type="text" value="%X"/>	07:51:36 PM
Date/Time	<input type="text" value="%c"/>	Wed 26 Apr 2006 07:51:36 PM MDT

---

#### Filesystem Permissions

Specify the default permissions for files and directories that Gallery creates. This doesn't apply to files/directories that Gallery has already created.

New directories 755 ▾

New files 644 ▾

#### Local Server Upload Paths

Specify the legal directories on the local server where a user can store files and then upload them into Gallery using the *Upload from Local Server* feature. The paths you enter here and all the files and directories under those paths will be available to any Gallery user who has upload privileges, so you should limit this to directories that won't contain sensitive data (eg. /tmp or /usr/ftp/incoming)

Path	Action
<input type="text" value="/home/amboymed/public_html/video"/>	<a href="#">remove</a>
<input type="text"/>	<input type="button" value="Add"/>

---

#### Session Settings

Session Lifetime 3 weeks ▾

Inactivity Timeout 1 week ▾

---

#### Embedded Markup

What kind of markup should we allow in user-entered fields? For security reasons we do not recommend that you allow raw HTML. BBCode is a special kind of markup that is secure and allows for simple text formatting like bold, italics, lists, images and urls.

Markup BBCode ▾

### Email

By default Gallery uses PHP's built in mail function to send email which requires no configuration. To use a smtp/mail server enter the information below, including authentication information if required. Optionally add :port after the server name to use a non-default port.

Server

Username

Password

SMTP From Address

Send a test email to verify your settings are correct (whether using PHP mail or SMTP settings above). Below enter a recipient email address for a test message.

### Cookies +

When Gallery is embedded in another application (portal, CMS, forum, etc.), then you have the choice between two options. Everyone else does not have to care about the cookie settings. Read on for more details.

Path

Domain

### Locking System

Gallery uses a system of locks to prevent simultaneous changes from interfering with each other. There are two types of locking, each with its advantages and disadvantages. **File** based locking is fast and efficient, but won't work on NFS filesystems and will be unreliable on Windows. **Database** locking is slower but is more reliable. If you are unsure which to choose, we recommend using file locking. If you're getting many lock timeouts, you can try switching to database locking instead. It's ok to switch back and forth.

Lock system

### Helper Processes

Some Gallery modules will use programs on your server to do image processing, archiving and other operations. These programs can be very computationally intensive and can impact the overall performance of a shared web server. You can make these programs run at a lower priority so that they play nice. If you're in a shared hosting environment and your web host is complaining, try setting your priority low.

Priority

47. From the menu on the left, select "Maintenance."

[hackneys.com Historical Media Archives](#)

Admin Options	System Maintenance			
Gallery	Task name	Last run	Success/Fail	Action
<a href="#">Captcha</a>	+ Delete user sessions	Not run yet	Not run yet	<a href="#">run now</a>

[Panorama](#)

## Acceleration

Improve your Gallery performance by storing entire web pages in the database. This can considerably reduce the amount of webservers and database resources required to display a web page. The tradeoff is that the web page you see may be a little bit out of date, however you can always get the most recent version of the page by forcing a refresh in your browser (typically by holding down the shift key and clicking the reload button).

**Partial Acceleration**

Partial acceleration gives you roughly 10-25% performance increase, but some forms of dynamic data (like view counts) will not get updated right away. All content that appears in blocks (like the random image block, any sidebar blocks, etc) will always be updated.

**Full Acceleration**

Full acceleration gives roughly a 90% performance increase, but no dynamic data (random image block, other sidebar blocks, number of items in your shopping cart, view counts, etc) will get updated until the saved page expires.

You can additionally specify when saved pages expire. Setting a longer expiration time will reduce the load on your server, but will increase the interval before users see changes. Lower expiration times mean that users will see more current data, but they will place a higher load on your server.

Here are some standard acceleration profiles:  
[No acceleration](#) — [Medium acceleration](#) — [High acceleration](#)

<b>Guest Users</b>	Full acceleration ▾	Expires after: 1 day ▾
<b>Registered Users</b>	Full acceleration ▾	Expires after: 1 day ▾

52. From the menu on the left select "Toolkit Priority." Ensure the settings match the following:

**Defaults**

These variables provide default values for applets users execute on your site. Users will be able to override these defaults by making changes in the user interface of the applets, or by changing their local defaults file.

Variable	Action
slideshowRecursive=1	<a href="#">Delete</a>
slideshowMaxPictures=0	<a href="#">Delete</a>
slideshowLoop=true	<a href="#">Delete</a>
slideshowRandom=true	<a href="#">Delete</a>

**Add a new default variable**

New variable  =

**Overrides**

These variables override any other values for applets users execute on your site. Users will not be able to change these values.

Variable	Action
toSysOut=true	<a href="#">Delete</a>

**Add a new override variable**

New variable  =

**Help**

Here are a selection of variables that affect slideshows.

variable	values	help
slideshowMaxPictures	100	maximum number of pictures shown in one go
slideshowRecursive	true/false	does slideshow display pictures inside sub-albums?
slideshowLowRez	true/false	if true, will prevent the slideshow from downloading the full-resolution pictures
slideshowLoop	true/false	does slideshow loop when it gets to the end?
slideshowNoStretch	true/false	if true, pictures smaller than the screen won't be stretched
slideshowPreloadAll	true/false	if true, the slideshow will download pictures before they're needed, which can speed up, but also may waste bandwidth
slideshowColor	0,0,0	color or the slideshow background
slideshowFontSize	30	size of text overlay
slideshowFontName	arial	font of text overlay
slideshowRandom	true/false	should the pictures be shown in random order?

57. Due to an inadequate implementation in the current version of Gallery, the hackneys.com Historical Media Archives does not currently utilize watermarks. When the implementation of batch application of watermarks and other capabilities is improved, watermarks will be implemented. To ensure the site is ready for this capability, confirm the watermark file has been imported and positioned. From the menu on the left, select "Watermarks." Ensure the settings match the following. The watermark is designed to appear in the upper right corner of the image. The watermark file is available in the Gallery backup PC folder structure.

[hackneys.com Historical Media Archives](#)

**Watermark Images**

File	Image	Owner	Action	Hotlink
hackneys watermark small 10.png		<a href="#">Douglas Hackney</a>	<a href="#">edit</a> <a href="#">delete</a>	<input checked="" type="checkbox"/>

**Watermark Hotlinked Images**

Gallery can automatically apply a watermark to images linked from sites outside your Gallery. Select a watermark above and then activate hotlink watermarks using the Rewrite module.

58. Click on the hackneys.com Historical Media Archives link in the upper right corner.

hackneys.com Family History Web Site  
Historical Media Archives

[Families](#)  
7289 Images **UPDATED**

Historical archives of photos, scanned documents, video and audio. (See user instructions below.)

---

This system contains the historical media archive for the hackneys.com family history web site. The hackneys.com historical media archive contains photos, scanned documents, video and audio.

The archive is arranged by family. To select the family media archives you wish to view, click once on the + sign next to a family name to expand that family's archives. Click once on the - sign next to a family name to collapse a family archive. Click on "Expand" to list all archive folders in the system. Click on "Collapse" to return to the main family grouping view.

Family archive folders that contain media begin with a five digit number. To view the contents of a family archive folder click once directly on the folder name.

The "bread crumb" display in the upper right corner of the screen will always show you where you are in the system. You can click back along the "bread crumb" trail to return directly to that level of the system.

To change the language of the system menus and prompts, select a language from the drop down list at the bottom of the page.

59. Click on "Edit" at the bottom of the page.

60. Ensure the tab dialog contents match the following:  
General

The screenshot shows a web-based 'Edit Album' interface. On the left is a sidebar with a logo for 'hackneys.com Historical Media Archives' and a list of navigation links: 'Add Album', 'Add Items', 'Edit Album', 'Edit Captions', 'Edit Permissions', and 'View Comments'. The main content area is titled 'Edit Album' and has a breadcrumb trail: 'hackneys.com Historical Media Archives'. Below the title are tabs for 'General', 'Album', 'Theme', 'Custom Fields', and 'MultiLanguage'. The 'General' tab is active. It contains sections for 'Title', 'Summary', 'Keywords', and 'Description'. Each section has a text input field and a set of formatting buttons (B, i, list, bullet, url, image). The 'Title' field contains 'hackneys.com Historical Media Archives'. The 'Summary' field contains 'Historical archives of photos, scanned documents, video and audio'. The 'Keywords' field is empty, with a note that keywords are not visible but are searchable. The 'Description' field contains a paragraph: 'This system contains the historical media archive for the hackneys.com family history web site. The hackneys.com historical media archive contains photos, scanned documents, video and audio.'

61. From the menu on the left select “Back to album”

62. From the folder tree, select the “Families” album

[hackneys.com Historical Media Archives](#) / Families

## Families

Page: [1](#) [2](#) [3](#) [4](#) [5](#) [6](#) ... [20](#) Page 1 of 20 [next >](#)

The archive is arranged by family. To select the family media archives you wish to view, click once on the + sign next to a family name to expand that family's archives. Click once on the - sign next to a family name to collapse a family archive. Click on "Expand" to list all archive folders in the system. Click on "Collapse" to return to the main family grouping view.

Family archive folders that contain media begin with a five digit number. To view the contents of a family archive folder click once directly on the folder name.

The "bread crumb" display in the upper right corner of the screen will always show you where you are in the system. You can click back along the "bread crumb" trail to return directly to that level of the system.

To change the language of the system menus and prompts, select a language from the drop down list at the bottom of the page.

89. In the dialog ensure that all settings match the following example. Make certain to click on the “select all” option to select all tables, enable the “Add DROP TABLE” and “Save as file” options. Once all options match, click on “Go.”

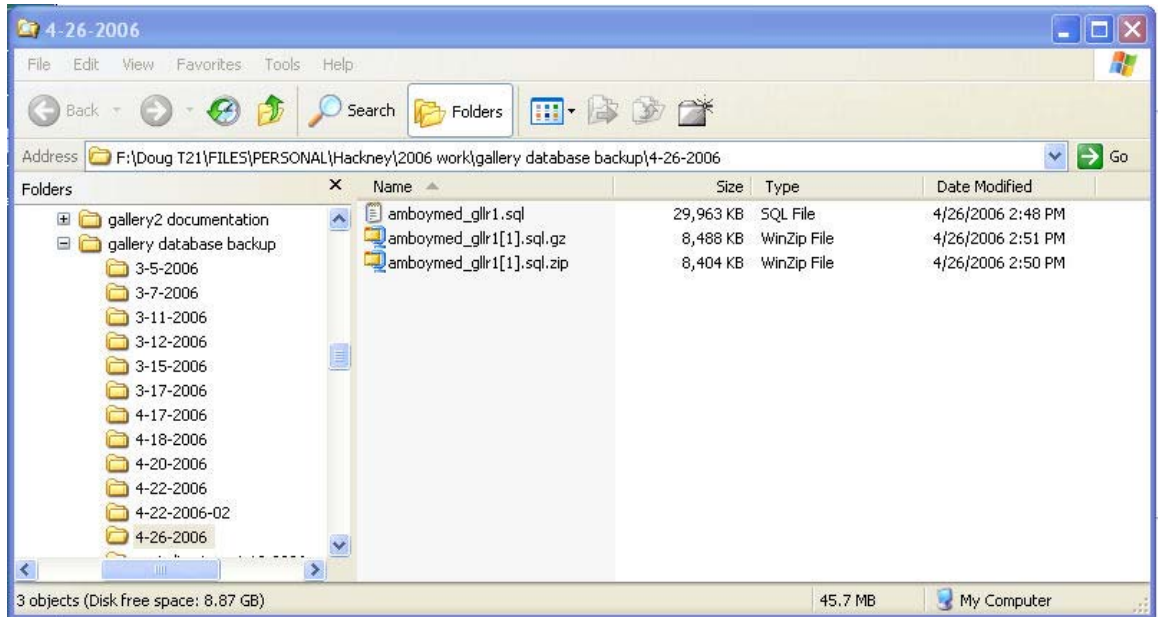

90. In the File Download dialog, select “Save”

91. In the file save dialog, navigate to the target folder location.

92. Run a backup for each file type to ensure maximum redundancy and flexibility on restoration.

93. Installation and configuration of the hackneys.com Historical Media Archives Gallery application is now complete.

## 15 Gallery Maintenance and Update

The hackneys.com Historical Media Archives currently contains 7,289 items including 45 hours of video.

Periodic addition of archive material to the Gallery system is required. This involves the preparation of source archive material and subsequent upload into the appropriate Gallery albums.

Source material preparation includes:

- Scanning documents and archival photos
- Cropping, editing, modification and optimization of photographs and document files
- Transfer of analog film and video tape to digital video files
- Transfer of digital video tape to video files
- Editing of video files
- Rendering of web streaming video files appropriate for the source material, i.e. low resolution for oral histories and higher resolution for all other material
- Adding new media archive material files to master PC folders
- Organizing and sorting of new material to maintain chronological order in master PC folders
- Sequential batch renaming of all master PC folder files to maintain file name sort chronological order including folder ID number
- Uploading new media to Gallery server

The upload process differs between document/photo files and video files.

For document/photo files:

- Deleting all contents of target Gallery album
- Uploading master PC folder using Gallery Remote
- QA check of updated Gallery album

For video files:

- Delete all necessary video files in the target Gallery album
- Copy video file from PC to amboymedia.com server root/public\_html/video folder
- Add video file to album using album "Add item" option
- Manually select and upload thumbnail for video file using album "add thumbnail" option
- QA check of updated Gallery album

This documentation will not address the specifics of media file preparation. It will address some unique steps required with this implementation.

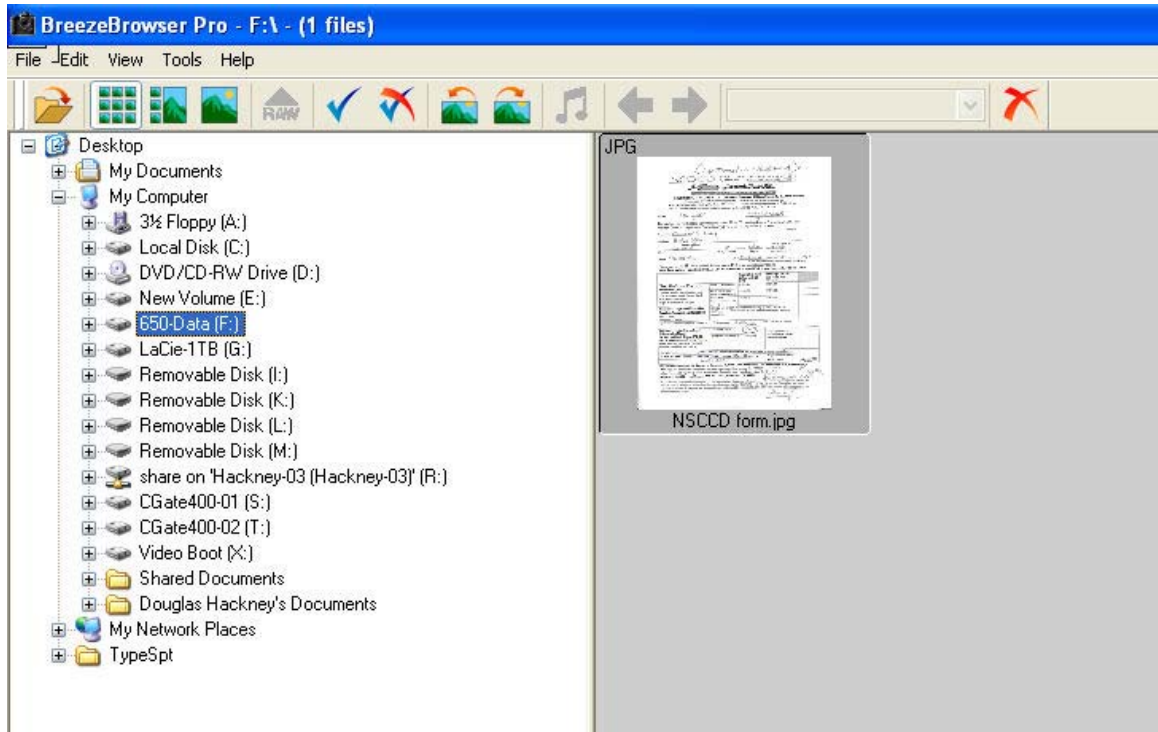

## 15.1 Sequential Batch Renaming

Breeze Browser Pro (BBP) (<http://www.breezesys.com/>) is used to sort photo files to establish and retain chronological order. BBP's "Batch Rename" capability is used to rename the entire folder of files and retain the displayed/sorted order and assign new sequential file names.

BBP can be used to copy photo files between folders by holding the CNTRL key down while dragging selected images from source folder to target folder.

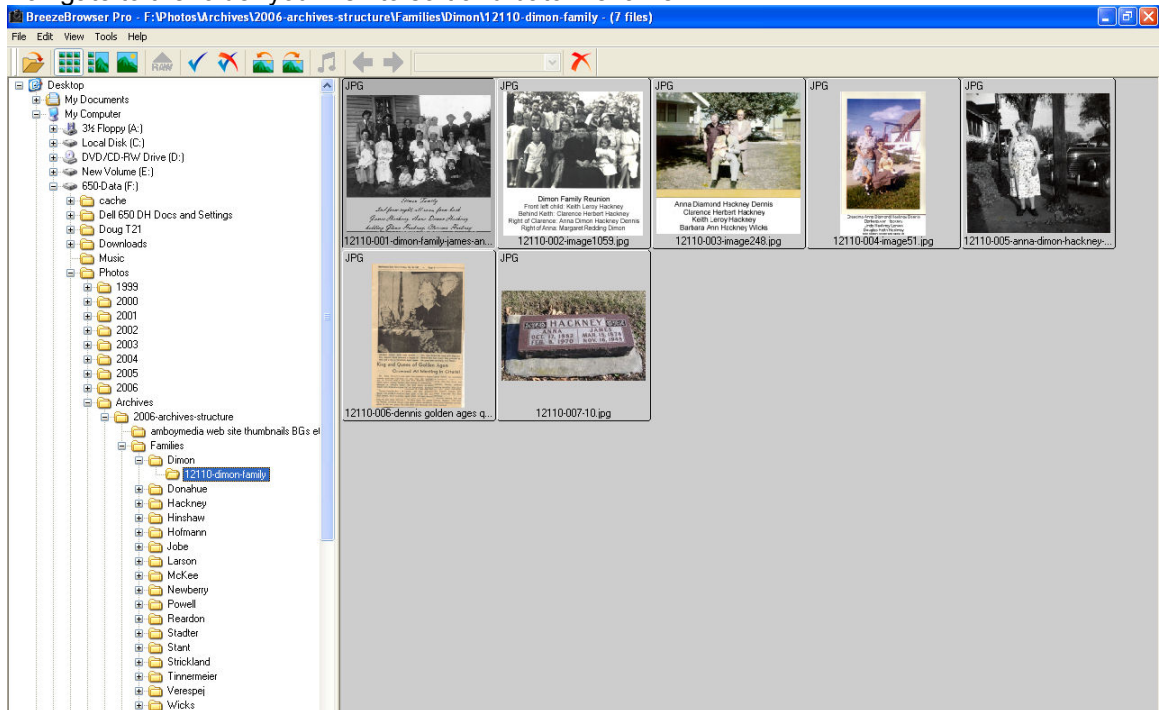

Steps for Sequential Batch Renaming

1. Start Breeze Browser Pro
2. Select the "Thumbnail View" icon

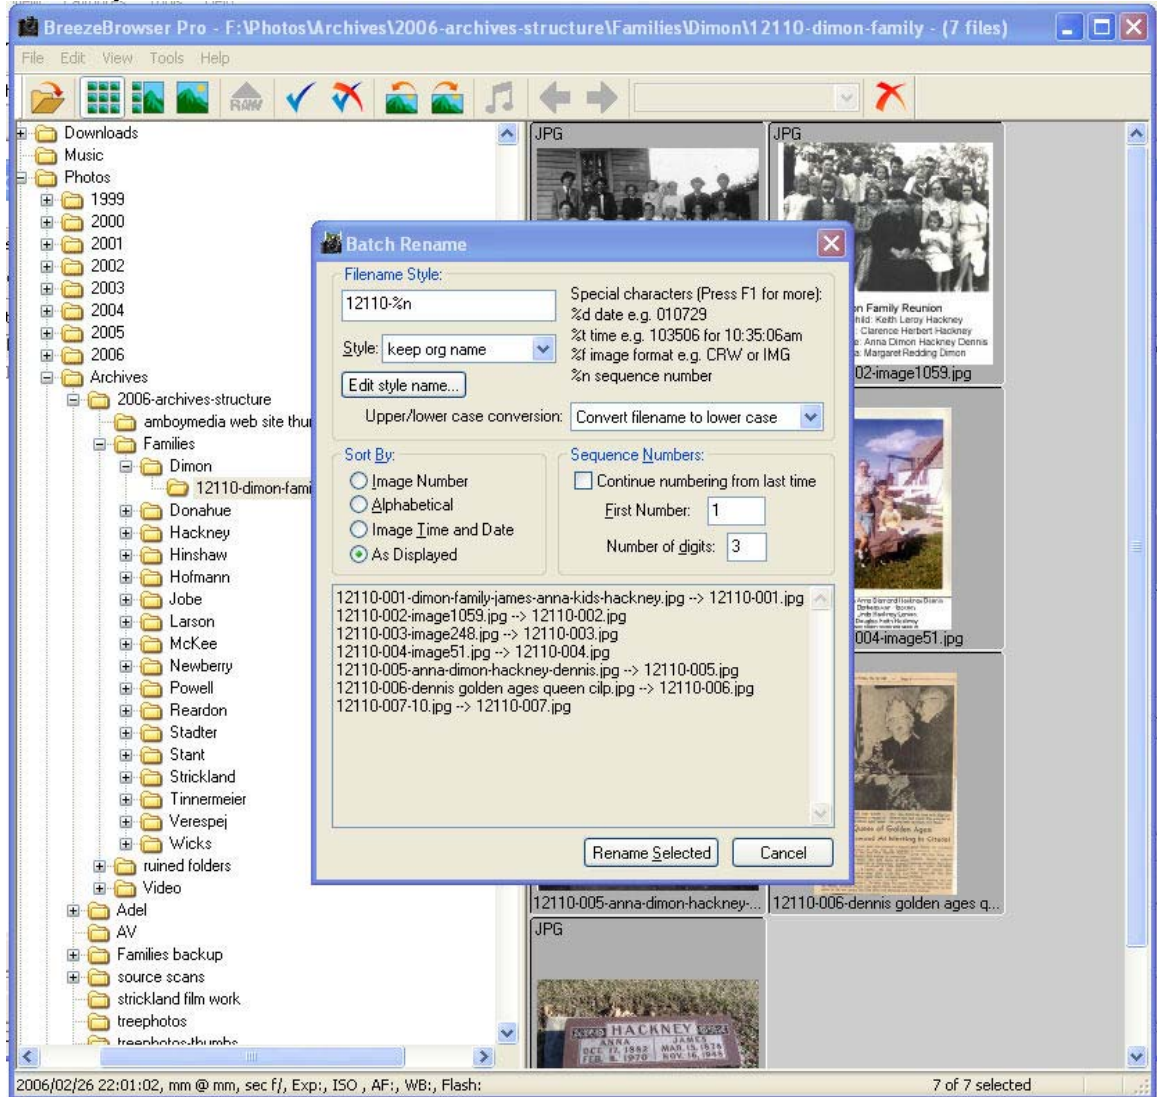

3. Use BBP or Windows File Manager to place the new image files into the master PC archive folder.

4. Navigate to the folder you wish to sort and batch rename

5. Click and drag the photos into the order you desire
6. Hold the CNTRL key down and hit A or select Edit:Select All
7. On the menu bar at the top of the screen select Tools:Batch Rename

8. Ensure the settings match the following example. Note that you MUST enter the proper XXXXX folder ID number for the folder you are working in. You can use a `-%o` variable at the end of the file name to preserve the existing file name if there is meta data contained in the file name, i.e. "Christmas 1968 at grandpa Hackney's." You may need to use RenameWiz or another file rename utility to further modify or edit the file names after the BBP operation, especially on existing master archive folders, i.e. existing master archive files that you retain the file name on.

9. Make SURE that the "As Displayed" variable is selected.
10. Be SURE you have the proper folder ID number in the file name field
11. Be SURE you have everything correct – THERE IS NO UNDO
12. Click on "Rename Selected"

## 15.2 Updating Album Contents

It is recommended that you completely delete all contents of an album before updating with the entire contents of the master PC archive folder and its new photos. This ensures that the master PC folder is always in sync with the web site and that the internal database is clean.

The Siriux album theme does not include a direct way to delete photos. In order to delete the contents of an album, you need to change the album's theme to Matrix, delete the album contents, change the album back to Siriux, and then upload the new contents.

The same process is used for deleting an album's contents regardless if it contains photos or video.

Two different processes are used to upload new content depending on if the album contains photos or video.

## 15.3 Delete an album's contents:

1. Open the hackneys.com Historical Media Archives using the introduction links at <http://www.hackneys.com/archives/pages/archives/index-archivephotos.htm> or open the archives directly at <http://www.amboymedia.com/gallery2/main.php>
2. Use the family folders to navigate to the XXXXX folder you need to update
3. Open the folder by clicking on the folder name
4. From the list in the green box, select "Edit album"

- Click on the "Album" tab, look in the Theme section and select "Matrix" from the drop down list.

17. From the list on the left select "Back to Album"

## 15.4 Uploading Photos and Documents

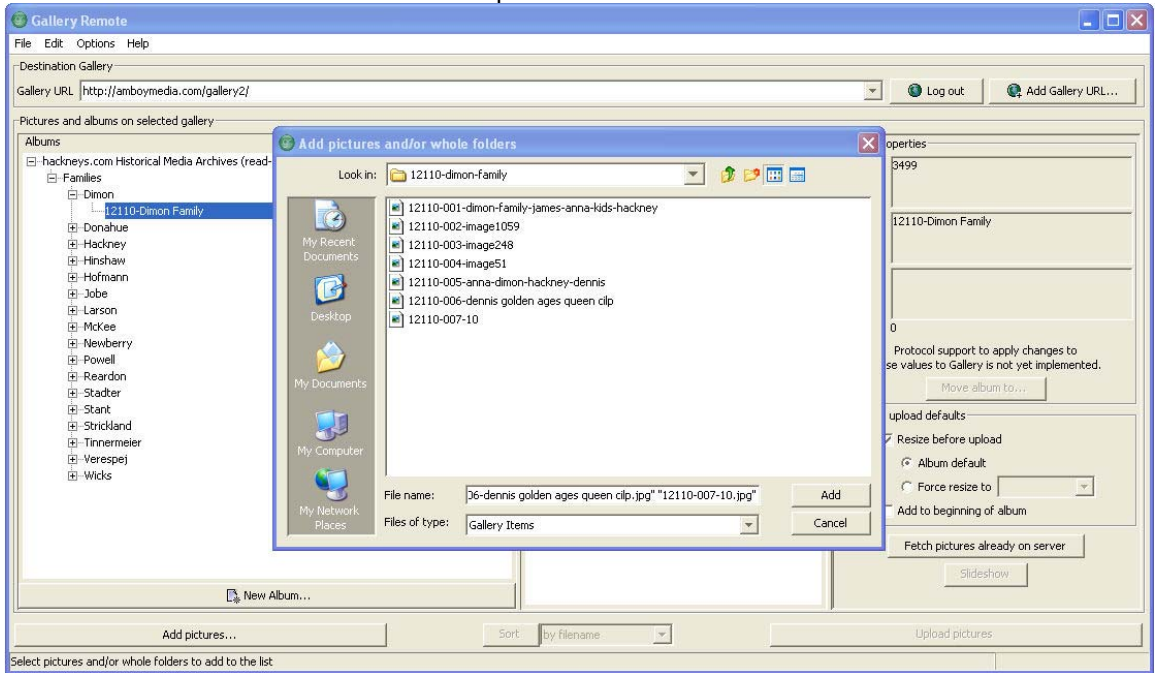

1. On the PC start Gallery Remote (available at <http://gallery.menalto.com/downloads> )
2. Log on to the amboymedia.com site
3. Navigate to the now empty target XXXXX level folder

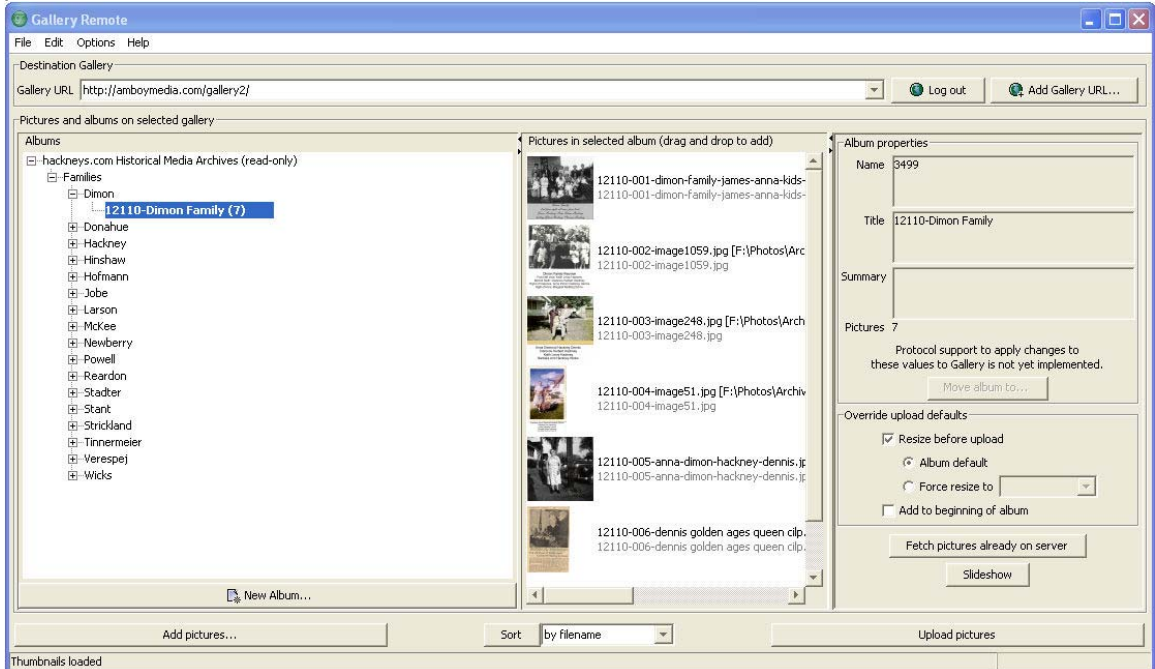

4. In the lower left, click on the “Add pictures” button
5. Navigate to the source PC master archive folder

- Click on the PC master archive folder to open and show the list of available files

- Hold the CNTRL key down and hit the letter A to select all files
- In the lower right corner, click on the “Add” button
- Gallery Remote will now build thumbnails for all selected images.
- When the thumbnails are complete, in the lower right corner, click on the “Upload pictures” button

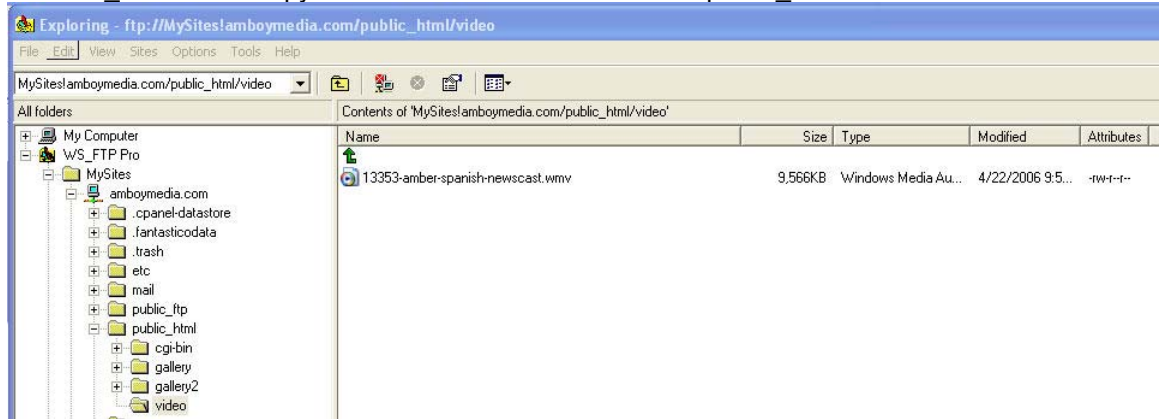

- The photos will be uploaded directly into the Gallery album.
- If a photo times out and is listed as not transferred, wait until the rest of the job completes, close the dialog box and re-click “Upload pictures.”

13. Open the hackneys.com Historical Media Archives using the introduction links at <http://www.hackneys.com/archives/pages/archives/index-archivephotos.htm> or open the archives directly at <http://www.amboymedia.com/gallery2/main.php>
14. Use the family folders to navigate to the target album
15. Check the album in Gallery to ensure all photos loaded correctly.
16. Step through each page of the album contents to build the thumbnail display pages
17. Step through each photo to ensure a good file transfer

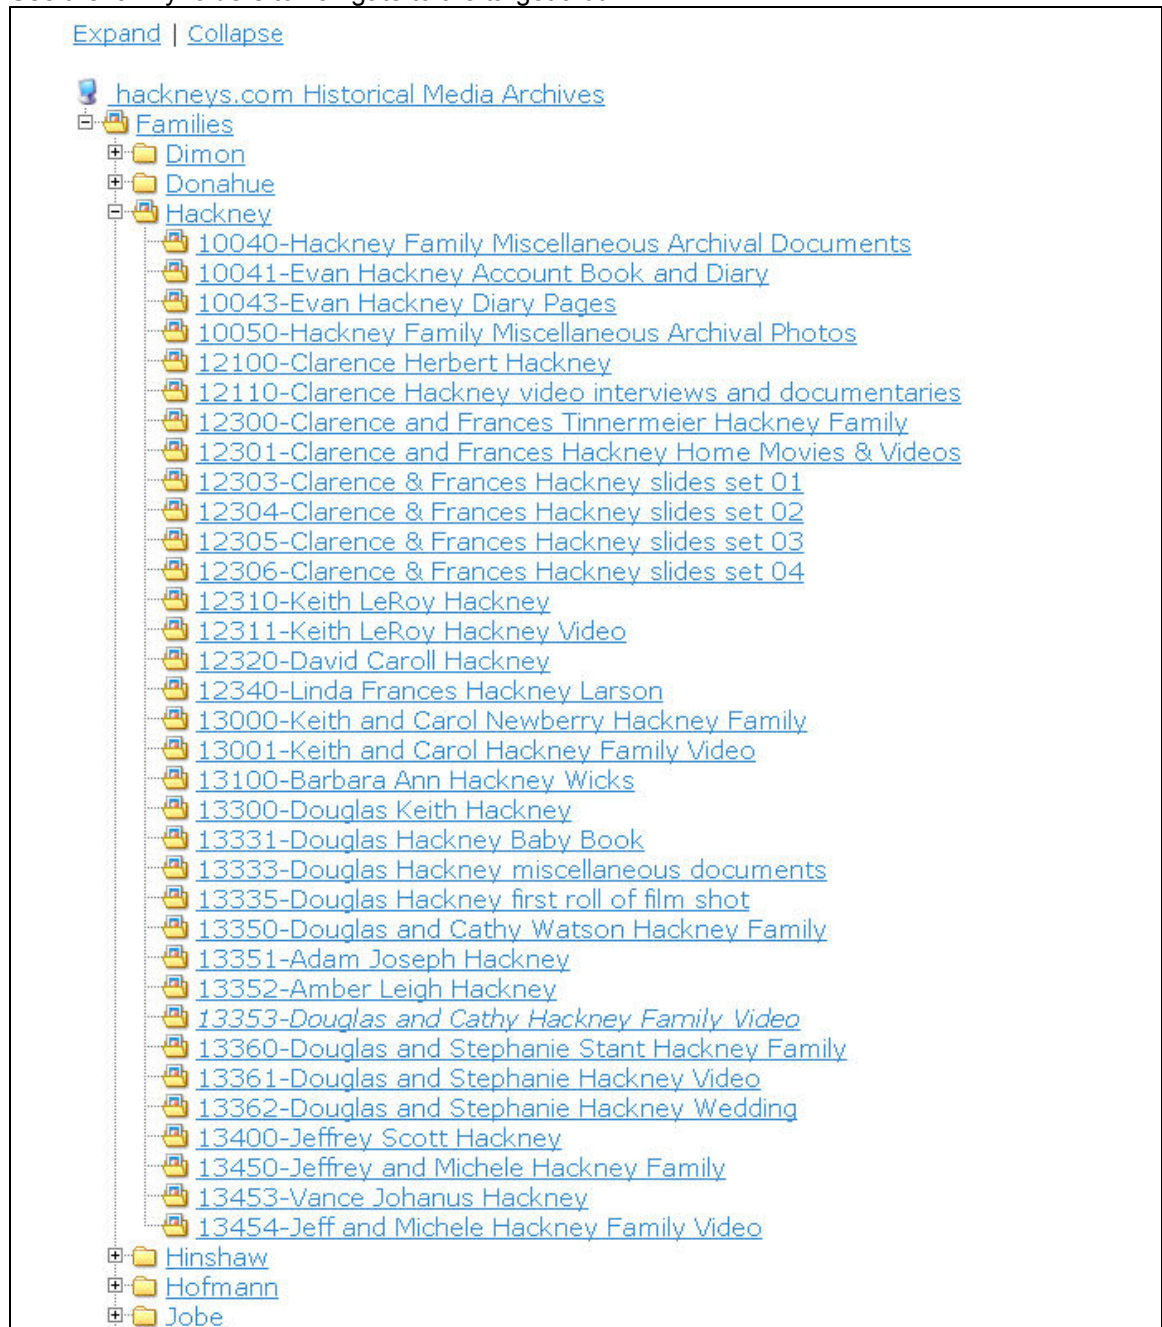

## 15.5 Uploading Video Files

1. Use WS\_FTP Pro to copy the PC master video files to root/public\_html/video

2. Open the hackneys.com Historical Media Archives using the introduction links at <http://www.hackneys.com/archives/pages/archives/index-archivephotos.htm> or open the archives directly at <http://www.amboymedia.com/gallery2/main.php>
3. Log on to the system

4. Use the family folders to navigate to the target album

5. Open the album by clicking on the album name
6. From the list in the green box, select "Edit Album"

7. From the list on the left select “Add item”

**Options**

Copy base filenames to:  
 Title  Summary  Description

**Thumbnails**

Gallery can create thumbnails at upload time, or create them the first time you want to see the thumbnail itself. Either way, it will create the thumbnail once and save it, but if you create them at upload time it makes viewing albums for the first time go faster at the expense of a longer upload time.

Create thumbnails now

### Edit Movie

**General** [Movie Size](#) [MultiLanguage](#)

**Name (required)**

The name of this item on your hard disk. It must be unique in this album. Only use alphanumeric characters, underscores or dashes.

Options:

**Title**

The title of this item.

**Summary**

The summary of this item.

17. Scroll down to the bottom of the page and select the "Browse" button

**Movie Date and Time**

Set the date and time to be displayed for this movie.

Date:    Time:

**Thumbnail**

Set the size of the thumbnail. The largest side of the thumbnail will be no larger than this value. Leave this field blank if you don't want a thumbnail.

**Custom Thumbnail**

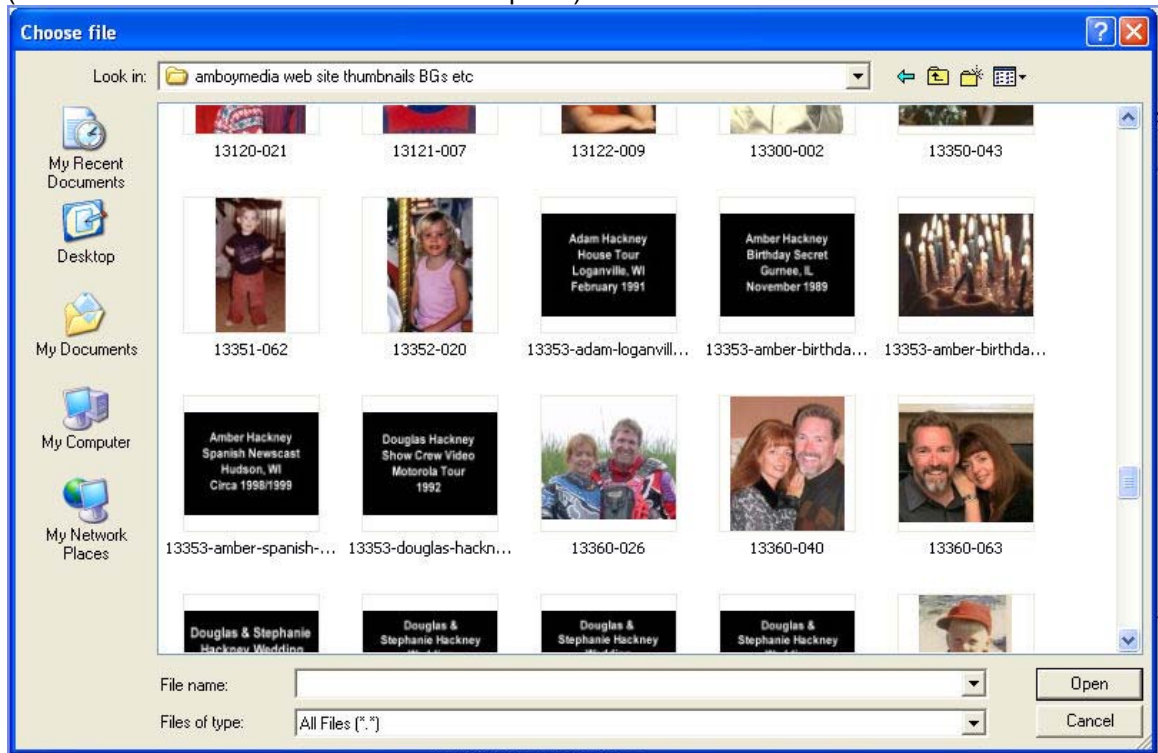

Upload a JPEG image to use as the thumbnail for this item. Image does not need to be thumbnail size; it will be resized as needed.

**Hide Movie**

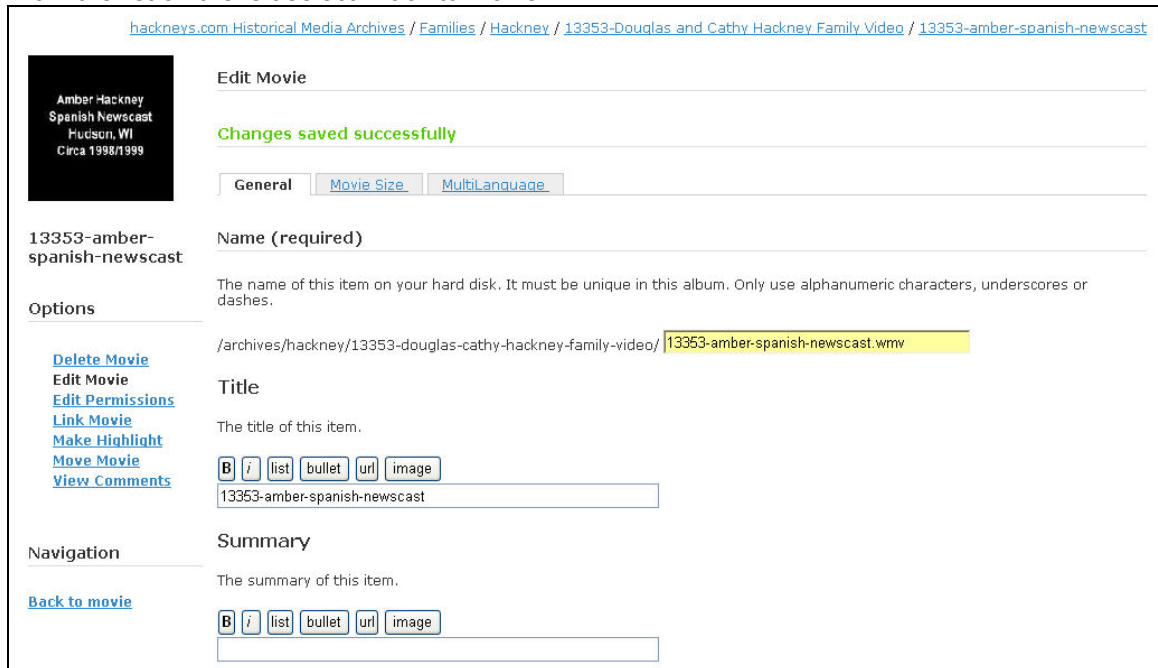

Hidden items are not visible to guest users until the page for the item is accessed directly. Note that guests need permission to view resizes and/or original items, as visiting the direct URL grants only simple view permission; access to resizes/originals is still controlled by item permissions.

Hidden

- Navigate to the PC master thumbnails folder and select the target thumbnail for the video (video thumbnails are created in Paint Shop Pro)

- In the lower right, select the “Open” button
- At the bottom of the page select the “Save” button
- From the list on the left select “Back to movie”

## 22. Select "Download movie" to ensure the file transfer was successful

## **16 hackneys.com Known Issues**

### **16.1 Known Issues**

The following are known issues with the hackneys.com web site:

- Historical Photo Name Roster is out of date. It has not been updated since version 2 and does not reflect the current contents of the Historical Media Archives
- Captions are needed in the following folders
  - 12303 – Clarence & Frances Hackney Slides set 01
  - 12304 – Clarence & Frances Hackney Slides set 02
  - 12305 – Clarence & Frances Hackney Slides set 03
  - 12306 – Clarence & Frances Hackney Slides set 04
  - 12522 – Margaret Ott Hennessey Larson family
- Watermark capability of Gallery2 V2.1.1 is limited and not implemented

### **16.2 Anticipated Upgrades**

The following server application versions are anticipated:

- phpGedView V4 (Q2 / Q3 2006)
- Gallery2 V2.X – incremental improvements are anticipated by Q3/Q4 2006

It is unlikely that any upgrades not required for security issues will be performed before the hackneys.com V4 project.

### **16.3 Queued Historical Archive Media**

The following media is queued for edit, caption & upload:

- Larson family archival images
- Various video segments transferred as part of the V3 project but not uploaded due to server storage space limitations

### **16.4 Environment Changes and Alterations**

- Bluehost has recently increased the allocated storage capacity from 10 GB to 15 GB. This increased space will allow the inclusion of more video in the archives.

## 17 Development Schedule

hackneys.com is currently at V3.0. There may be incremental upgrades and maintenance during the V3 era.

The hackneys.com V4 project is anticipated to be in the 2009/10 time frame.
