

Rumors

Rumors are ugly things.

They spread like kudzu and once repeated a few times they become truth, they become reality.

There are several rumors, distorted, untrue rumors, even ugly rumors, floating around about our Global Expedition Vehicle project.

I'd like to do my part to set this right.

First off, while our rig will be Spartan by our normal living standards, it is entirely unfair to call it rustic.

There are also several nasty rumors floating around about the electrical system I designed. I refute the notion that it is either overly complex or rooted in archaic design principles.

Rumors

Likewise, I'd like to kill right here the contention that our power and control systems are equally antique. They are nothing of the kind.

They are, in fact, the subject of much admiration among those who have seen them.

Rumors

Likewise, I shall immediately and irrevocably dispel the notion that the rig's generator is larger than our pickup. This is entirely untrue.

It is, in fact, favorably sized when compared to the pickup.

Rumors are nasty things. Avoid them.

If you choose instead to seek out the facts, the truth, the way things really, actually are, well then you'll need to see things yourself, eyewitness them, wherever on the planet they may be.

Or, you could follow along with our project at: <http://www.hackneys.com/mitsu/>

Your choice.
